Linyi, Shandong Jun 22, 2026 ([IssueWire.com](https://www.issuewire.com)) - Rugged Open Cargo Bed for Maximum Payload & Easy Loading

The ASIAN DRAGON cargo tricycle stands out with its heavy-duty open-tilt cargo bed, engineered to carry up to 500kg of payload—perfect for hauling sacks of grain, construction aggregates, or large equipment across farm fields or job sites. Unlike enclosed models, the open design allows for quick, easy loading and unloading from all sides, with reinforced steel side panels and a hydraulic tilt mechanism (optional) that lets operators dump cargo with minimal effort, saving time and labor during daily operations. The high-sided bed prevents loose materials from spilling during transit, while the sturdy steel frame and cross-bracing ensure structural integrity even under maximum load.

Finished in a bright, corrosion-resistant blue coating, the tricycle's exterior is built to withstand exposure to rain, dust, and UV radiation, maintaining its appearance and functionality for years of heavy use. The compact wheelbase and narrow profile make it highly maneuverable in tight farm lanes, construction site alleys, and rural village roads where larger trucks cannot access, ensuring efficient last-mile transport for rural communities.

Off-Road Performance for Challenging Terrain

Designed to tackle rough, unpaved roads and uneven farmland, the ASIAN DRAGON cargo tricycle features a motorcycle-style front end with dual hydraulic shock absorbers and large 4.00-12 knobby tires, delivering exceptional traction and shock absorption. The front fork suspension absorbs impacts from potholes, rocks, and ruts, protecting both the driver and cargo from jostling, while the rear differential and heavy-duty leaf springs ensure stable handling even when carrying maximum payloads.

Powered by a 1800W brushless DC motor, the tricycle delivers strong low-end torque to climb steep hills and navigate muddy or sandy terrain with ease, eliminating the struggle of gas-powered alternatives in low-traction conditions. The 60V/45Ah lithium-ion battery provides a range of 70–90km on a single charge, enough for a full day of hauling between farms, markets, or construction sites, with fast charging capability that refuels to 80% in just 3 hours, minimizing downtime for critical operations.

Driver Comfort & Safety for Long Workdays

The ASIAN DRAGON prioritizes driver comfort and safety during extended work hours. The padded, ergonomic seat with back support reduces fatigue during long shifts, while the wide, anti-slip footrests provide secure footing even on bumpy roads. The motorcycle-style handlebars offer intuitive control, with a digital instrument panel displaying speed, battery level, and trip distance, keeping operators informed of vehicle status at a glance.

Safety features include a bright round headlight and turn signals for visibility in low light, a front bumper guard to protect the vehicle from minor collisions, and a dual-brake system (front disc + rear drum) that delivers reliable stopping power even under heavy loads. The tricycle's low center of gravity—optimized by placing the heavy battery low in the frame—enhances stability on slopes and uneven ground, reducing the risk of tipping during transit.

Factory-Direct Value from Linyi Fulong

Manufactured by Linyi Fulong Electric Bicycle Factory—a leading producer of electric two-wheelers and three-wheelers with decades of experience—the ASIAN DRAGON Open-Tilt Cargo Tricycle is available directly from the factory, cutting out middlemen to offer competitive pricing for bulk orders, agricultural cooperatives, and construction companies. Customization options include battery upgrades, hydraulic tilt beds, and color variations to meet specific operational needs.

Global customers benefit from reliable shipping and responsive after-sales support, ensuring that businesses worldwide can access this efficient, eco-friendly transport solution. Whether you're a farmer hauling produce to market, a contractor moving construction materials, or a rural logistics provider delivering goods to remote villages, the ASIAN DRAGON cargo tricycle delivers the power, durability, and value you need to keep your operations moving.
