

AutoSeek Launches AI-Powered Monthly Mobility Platform for the Next Generation of Drivers

Sunnyvale, California Jun 1, 2026 ([IssueWire.com](https://www.IssueWire.com)) - [AutoSeek](#), a fast-growing mobility technology startup based in Silicon Valley, announced the expansion of its AI-powered monthly vehicle subscription platform designed to make car access more affordable, flexible, and intelligent for young drivers, students, and modern urban consumers.

Founded by Dr. Cici Cao, AutoSeek aims to redefine vehicle ownership through a subscription-based mobility model that combines AI safety systems, insurance innovation, and flexible access to vehicles without the burden of long-term leases or excessive young driver fees.

“Our mission is simple: mobility should be a basic right, not a luxury,” said Dr. Cici Cao, CEO of AutoSeek. “We believe AI can fundamentally improve safety, affordability, and trust across the transportation ecosystem.”

The company’s platform allows customers to access vehicles through flexible month-to-month subscriptions while integrating intelligent driving safety technologies under its proprietary AICO™ system.

AutoSeek's technical development is led by Dr. Dawei Li, Chief Technology Officer, who oversees the company's AI infrastructure, telematics systems, and mobility data platform. The company is also working closely with strategic partner Zikai Huang, Jinru Zhou on ecosystem expansion and business development initiatives.

AutoSeek is currently developing advanced AI-powered driving behavior analysis tools designed to help reduce accident rates, improve driver coaching, and create a new behavioral risk intelligence layer for the automotive and insurance industries.

The company believes the future of mobility will be powered not only by electric vehicles and autonomy, but also by intelligent infrastructure capable of reducing risk in real time.

"Traditional mobility companies price risk," said Dr. Cao. "We want to reduce risk through AI."

AutoSeek is currently expanding across California and exploring strategic partnerships in insurance, fleet operations, and AI safety technologies.
