London, United Kingdom Jun 8, 2026 ([IssueWire.com](https://www.IssueWire.com)) - **Crawfords Metal Detectors**, one of the United Kingdom's most respected authorized Minelab and XP dealers, has confirmed that the new Minelab Vanquish 60 Series is now in stock and available for immediate dispatch. The range — comprising the [Vanquish 360](#), [Vanquish 460](#), [Vanquish 560](#), and the Vanquish 560 Pro Pack — represents one of the most significant mid-range detector launches in recent years, bringing Minelab's Multi-IQ® simultaneous multi-frequency technology to detectorists at every experience level and budget.

Originally unveiled at the National Gallery Museum in London and demonstrated live at Detectival 2025, the Vanquish 60 Series has been one of the most eagerly anticipated releases in the UK detecting community. With full IP68 waterproofing across every model, an integrated rechargeable lithium-ion battery, and a completely refreshed coil range, it marks a meaningful step forward from the original Vanquish series.

What is the Minelab Vanquish 60 Series?

The Vanquish 60 Series succeeds the popular Vanquish 340, 440, and 540 line-up, retaining the hallmark accessibility and Multi-IQ performance while delivering a substantially upgraded hardware

platform. Every model in the 60 Series shares a common core specification that sets a new benchmark at this price point in the UK market.

Shared across all four models:

- Multi-IQ® simultaneous multi-frequency technology — the same proven engine used in the Equinox series, delivering stable target IDs across variable ground and saltwater beaches
- Full IP68 waterproofing to 5 metres (16 ft)—the entire machine, not just the coil—a significant upgrade from the original Vanquish range
- Integrated rechargeable lithium-ion battery providing approximately 10 hours of detection per charge
- Collapsible, lightweight shaft design: extended ~142 cm, collapsed ~79 cm
- Three-year warranty on control box and coil

The Four Models: A Clear Path for Every Detectorist

One of the Vanquish 60 Series' most considered design decisions is the clear, logical progression from entry-level to fully equipped across its four models. UK detectorists can enter the range at the right level for their experience and budget, with a natural upgrade path as the hobby develops.

Minelab Vanquish 360 — The Perfect Starting Point

The Vanquish 360 is the entry point into the 60 Series and the most accessible Multi-IQ detector Minelab has ever produced. It ships with the V10X coil (25×18 cm), three target tones, six discrimination segments, and fixed-preset ground balance—a configuration that makes it virtually plug-and-go straight from the box. For parents buying a first detector for a child or a complete newcomer heading to a UK field or beach for the first time, the 360 delivers genuine multi-frequency performance without the learning curve. IP68 to 5 meters means there is no anxiety about rain, river banks, or shoreline hunting.

Minelab Vanquish 460 — The Hobbyist's Mid-Point

For detectorists who have outgrown 'beginner' machines but are not yet ready to commit to the Equinox price bracket, the Vanquish 460 occupies a highly compelling middle ground. It adds three-level iron bias control (compared to the 360's fixed setting), improved target separation, enhanced recovery speed, and—critically—Bluetooth LE Audio support, enabling pairing with the ML60 wireless earbuds. For detectorists who go out regularly and hunt varied ground, the 460 offers more control without requiring expert-level programming to use effectively.

Minelab Vanquish 560 — Maximum Capability in the Series

The Vanquish 560 is the flagship single-coil model in the 60 Series and the first Vanquish machine to carry a feature set that genuinely challenges machines in higher price brackets. It ships with the larger V12X coil (30×22 cm) for greater ground coverage and depth, runs five target tones (compared to three on the 360 and 460), and offers expanded iron bias and iron volume controls. The 560 is also compatible with Equinox coils—a significant practical advantage that gives owners access to one of the most extensive third-party coil ecosystems in the industry. For intermediate to experienced UK detectorists hunting fields, beaches, and relic sites, the 560 is the natural choice.

Minelab Vanquish 560 Pro Pack — The Complete Kit

The Vanquish 560 Pro Pack is the definitive version of the 60 Series for detectorists who want to be prepared for any terrain from day one. It includes the full 560 specification, adds the compact V8X coil (20×12 cm) for tight, iron-dense sites and confined spaces, and includes the ML60 wireless earbuds with Bluetooth LE Audio—the lowest-latency wireless audio experience. Minelab has ever delivered at this price point. For UK detectorists who hunt across multiple site types—open farmland one weekend, worked beach the next—the dual-coil setup removes the need for an early additional coil purchase and makes this the most cost-effective package in the range.

Part of the UK's Most Comprehensive Detector Range

The Vanquish 60 Series sits at the heart of one of the most complete detector ranges available from a single UK specialist. Whether a detectorist is beginning the hobby, progressing through the mid-range, or seeking the most capable machines in the world, Crawfords stocks the full progression.

At the advanced end of the multi-frequency market, the Minelab Equinox 900 — with its 119-segment -19 to +99 target ID scale, dual iron bias and recovery speed controls, and vibration handgrip—remains the benchmark for serious UK field hunters. The Minelab Manticore pushes further still with Multi-IQ+ technology and a 2D target ID display for detectorists hunting iron-saturated medieval ground. At the absolute pinnacle of performance, the Minelab GPZ 8000 brings GeoZVT™ technology and the Z-Set concentric toroidal coil system to gold prospectors demanding the deepest possible penetration.

On the multi-frequency side from Nokta, the [Nokta Legend 2](#) continues to attract detectorists seeking a technically distinct SMF platform—complete with dual-coil inclusion, five search modes including dedicated Relic mode, and wireless firmware update capability at a highly competitive price point. Crawfords has recently published a detailed technical comparison between the Legend 2 and the [Minelab Equinox 900](#) to help experienced detectorists choose between the two.

The full metal detector range at Crawfords spans machines from Minelab, XP, and Nokta across every budget and site type, with specialist pre-sales advice available for every purchase.

Expert UK Comparison Content for Informed Buyers

As part of its wider commitment to producing genuinely useful, field-tested content for UK detectorists, Crawfords has published a comprehensive Nokta Legend 2 vs. Minelab Equinox 900 technical comparison—covering multi-frequency architecture, audio systems, target ID scales, recovery speed, and beach performance in precise detail. Further guides, including a dedicated Vanquish 60 Series buyer's guide tailored to UK sites, are planned for publication later in 2026.

"The Minelab Vanquish 60 Series is exactly the kind of product the UK detecting market has been waiting for. Full waterproofing, Multi-IQ, and a rechargeable battery—all from the entry-level model upwards. Whether someone is picking up a detector for the first time or looking for a reliable second machine, there is a Vanquish 60 for them. We're delighted to have all four models in stock and ready to go." **Crawford's Metal Detectors**

About Crawford's Metal Detectors

Crawfords Metal Detectors is a North Lincolnshire-based specialist metal detector retailer and one of the UK's leading authorized dealers for Minelab and XP. The company stocks a comprehensive range of machines for all experience levels — from the new Vanquish 60 Series through to the Minelab GPZ 8000 — alongside a full range of accessories, coils, pinpointers, and digging equipment. With a focus

on genuine product knowledge, expert pre-sales support, and competitive UK pricing, Crawfords has built a strong and loyal reputation across the UK detecting community.

The full Vanquish 60 Series range is available now at crawfordsmd.com with immediate dispatch.

KEY FEATURES

- Multi-ID Simultaneous Multi-Frequency
- Full IP68 - 5m Waterproof
- Rechargeable Battery Built-In
- Bluetooth LE Audio Support
- Equinox Coil Compatible (Vanquish 590 and Pro Pack)
