

Dex System Expands Its Catalog with New Releases and Featured Author Spotlight on Rane Corvus

The Independent Imprint Behind The Hard Handover Continues to Build One of the Most Distinctive Publishing Ecosystems in Independent Nonfiction and Speculative Fiction

Los Angeles, California Jun 7, 2026 (IssueWire.com) - Dex System, the independent publishing imprint operating through the Cipher Grid digital hub, today announces expanded catalog availability across its full roster of titles, with a featured spotlight on author Rane Corvus and continued distribution momentum for its flagship nonfiction release, *The Hard Handover: An Owner's Manual for the 2026 Transition* by Tomison Peters.

Since its IssueWire syndication earlier this month, the announcement of *The Hard Handover* has been picked up by over 143 media outlets worldwide, cementing Dex System's growing presence in the independent publishing space. The book — framed as an urgent field guide to the institutional, technological, and geopolitical forces reshaping governance in real time — continues to draw attention for its direct, tools-first approach to one of the defining moments of the current era.

Alongside its flagship nonfiction, Dex System highlights the work of Rane Corvus as a central pillar of the imprint's speculative fiction catalog. Corvus' interconnected body of work — spanning *Ocean Moon*, *Silicon Cross: 200 Centuries of Signal*, *Sovereign Sync*, *Sovereign Sync II: The Author Protocol*, and *The Node Seven Sync* — blends rigorous narrative worldbuilding with underlying systems thinking, making it a vital companion to the imprint's broader intellectual identity. Together, the Sync series and

the imprint's nonfiction titles form a coherent creative and analytical ecosystem exploring what it means to navigate — and survive — transition at every scale.

"Dex System exists at the intersection of ideas and action," said a spokesperson for the imprint. "Whether it's Tomison Peters giving readers the tools to think faster than the forces trying to outrun them, or Rane Corvus mapping the deeper architecture of how systems evolve and collapse, every title we publish is asking the same essential question: what do you do when the ground shifts beneath you?"
