**Hong Kong, Hong Kong S.A.R. Jun 29, 2026 ([Issuewire.com](http://Issuewire.com))** - Retailers and product teams frequently update catalogues as product lines, pricing, and visuals change. Turning those updates into a polished catalogue often requires additional layout work, delaying the time it takes to share new collections with buyers. FlipHTML5's [product catalogue template](#) collection provides professionally designed starting points that simplify the creation of interactive digital catalogues while reducing manual design work.

Each product catalogue template includes pre-designed cover pages, category sections, and product layouts where users can add images, descriptions, specifications, and pricing. Existing designs can be adapted for seasonal collections, new product launches, or updated inventories while maintaining a consistent visual structure throughout the catalogue. This approach helps businesses refresh product

presentations more efficiently without recreating every page from scratch.

Branding editing tools allow each catalogue to reflect a company's visual identity. Logos, color themes, fonts, and cover styling can be customized before publication so the finished edition aligns with other marketing materials. Users can also add links that direct readers to product pages, inquiry forms, or contact channels, making it easier for buyers to continue exploring products after viewing the catalogue.

FlipHTML5 allows users to create page-flip [digital catalogues](#) for interactive publishing. Videos, image galleries, and clickable links can be embedded throughout the catalogue, allowing readers to browse product details, request quotations, or visit purchase pages without leaving the publication.

Completed catalogues can be shared through hosted links, website embeds, email, or QR codes placed on printed materials, retail displays, or trade-show booths. Because every edition is hosted online, sales teams, distributors, and customers always access the latest version, reducing the risk of outdated catalogues remaining in circulation after product information changes.

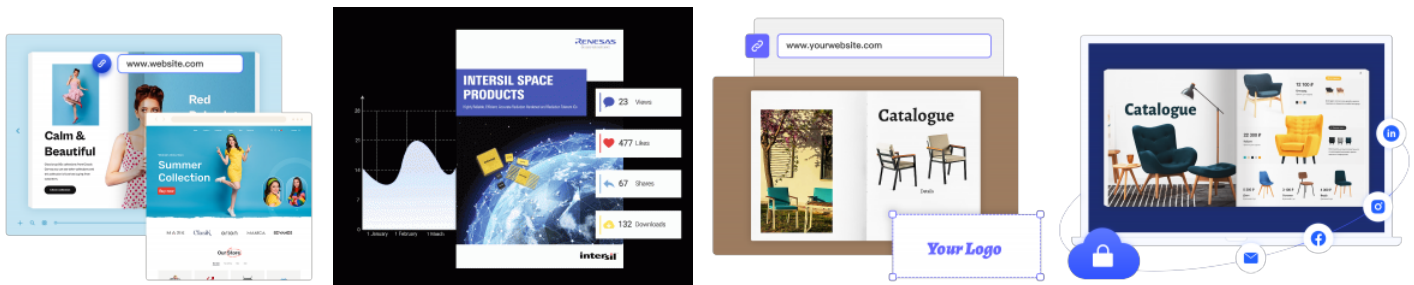

The gallery includes free catalog templates for fashion, furniture, jewelry, and many other industries. Users can compare layouts, select a suitable product catalogue template, customize it with their own branding and product information, and publish an interactive online catalogue from the same platform.

"Our product catalogue template collection helps businesses create professional digital catalogues without rebuilding layouts from the beginning," said Winston Zhang, CEO of FlipHTML5. "With flexible customization, interactive publishing, and online sharing, the platform supports a more efficient workflow from product information to a polished catalogue."
