

## Foundry Launches to Help Businesses Scale AI Without Enterprise Complexity

**Annapolis, Maryland Jun 2, 2026 ([IssueWire.com](https://www.issuewire.com))** - Built around a three-tier model, Foundry delivers AI solutions tailored to different stages of business growth:

Self-Service for startups and small businesses seeking immediate operational leverage  
Growth Solutions for medium-to-large organizations scaling workflows and internal systems Enterprise

Infrastructure for companies requiring fully customized AI environments, integrations, and strategic implementation

Rather than positioning AI as another disconnected tool, Foundry is focused on practical deployment — helping organizations automate intelligently, move faster, and build systems that compound over time. “Most companies don’t need more AI demos. They need infrastructure that actually works inside the reality of their business,” said Ben Woodard. “Foundry was built to remove the complexity barrier. Whether you’re a small business trying to automate operations or an enterprise deploying AI at scale, the goal is the same: make advanced systems usable, accessible, and operational.”

Foundry enters the market at a time when businesses are increasingly overwhelmed by fragmented AI tools, disconnected workflows, and rising implementation costs. The company believes the next phase of AI adoption will belong to platforms that prioritize operational simplicity, scalability, and long-term usability over hype cycles. As part of the broader ArcheForge ecosystem, Foundry benefits from the company’s philosophy around continuity, intelligent systems, and infrastructure-first AI development. “AI shouldn’t feel experimental forever,” Woodard added. “Businesses need systems they can rely on. Foundry exists to close the gap between possibility and execution.”

The company plans to continue expanding its offerings throughout 2026, including additional automation frameworks, intelligent workflow systems, and enterprise-scale deployment capabilities.

#### About Foundry

Foundry is an AI infrastructure and automation platform built to help businesses deploy intelligent systems at every stage of growth. Through self-service tools, scalable business solutions, and enterprise-grade implementations, Foundry helps organizations automate operations, streamline workflows, and unlock practical AI adoption.

#### About ArcheForge

ArcheForge builds identity-layered AI systems and intelligent infrastructure designed to make technology more adaptive, persistent, and operational over time.
