 **BUILT FOR U.S. GARDENERS**
Tailored to your region

 **JOIN OUR GROWING COMMUNITY**
Thousands of gardeners growing together

 **GardenTruth**
Growing better together.

Hyderabad, Telangana Jun 8, 2026 ([Issuewire.com](https://www.issuewire.com)) - GardenTruth, an educational gardening website dedicated to practical, research-based gardening guidance, today announced the expansion of its free gardening tools platform designed to help U.S. home gardeners make more informed planting and garden management decisions.

As interest in home gardening, food production, pollinator-friendly landscapes, and sustainable outdoor living continues to grow, many gardeners face challenges related to garden planning, planting schedules, and diagnosing plant health issues. GardenTruth's free online tools aim to simplify these decisions through easy-to-use resources built around proven gardening practices and trusted horticultural information.

Key tools now available include the [Garden Planner Tool](#), which helps gardeners organize planting layouts, optimize growing space, and plan productive gardens; the [Plant Diagnosis Tool](#), which assists gardeners in identifying common plant health problems and exploring practical solutions; and the [USA Planting Calendar](#), which provides planting recommendations based on USDA growing zones and seasonal growing conditions across the United States.

Additional resources include mulch, compost, plant spacing, raised bed soil, topsoil, and garden budget calculators designed to simplify common gardening projects and planning decisions.

“Our mission is to make reliable gardening information and planning tools accessible to everyone,” said Jagdish Reddy, Founder of GardenTruth. “Whether someone is growing vegetables in a backyard, creating a pollinator garden, or planning a new raised bed, we want to provide practical tools that help gardeners achieve better results with confidence.”

In addition to its free tools, GardenTruth publishes educational guides covering vegetable gardening, pollinator-friendly planting, seasonal gardening tasks, planting calendars, soil improvement, and sustainable gardening practices tailored to American gardeners.

Gardeners can access these free tools and additional educational resources at [GardenTruth.com](https://www.gardentruth.com).

About GardenTruth

GardenTruth is an independent gardening resource that helps home gardeners make informed decisions through research-backed guides, planning tools, calculators, and practical gardening advice. The platform covers vegetable gardening, pollinator gardens, landscape planning, seasonal planting, and sustainable gardening practices for gardeners across the United States.
