

Hibt Launches Prediction Market, Expanding Access to Crypto Event Trading and Market Forecasting

Hibt launches Prediction Market, allowing users to participate in Bitcoin price forecasts, crypto event trading, and global prediction opportunities, including upcoming markets related to the 2026 FIFA World Cup.

The image is a promotional graphic for Hibt's Prediction Market. It features a bright green background. On the left, the Hibt logo is at the top, followed by the text "Hibt Prediction Market" in large, bold, black letters. Below this, the tagline "Turn Your Insights into Positions" is written in a smaller, black font. On the right side, there is a smartphone displaying the Hibt app interface. The app shows a "Trending" section with a "World Cup: Nation of Top Goalscorer" prediction. Below this, there are two rows of data: "France" with a 25.0% probability and "Spain" with a 16.0% probability. Each row has "Yes" and "No" buttons. Below the phone, there is a hand holding a stack of silver coins, and a "GUESS" button is visible. A small, purple, star-shaped icon is also present near the phone.

Singapore, Singapore Jun 11, 2026 ([Issuewire.com](https://www.Issuewire.com)) - [Hibt](https://www.Hibt.com), a global cryptocurrency exchange and digital asset trading platform, has officially launched its Prediction Market product, expanding the platform's Event Contract ecosystem and introducing a new way for users to participate in crypto market forecasting and event-based trading.

The launch marks another milestone in Hibt's product development strategy as the platform continues to explore innovative trading models that connect market insights, community participation, and real-world events. By introducing Prediction Markets, Hibt aims to provide users with a simpler and more engaging way to interact with cryptocurrency markets beyond traditional spot and derivatives trading.

Over the past few years, Prediction Markets have emerged as one of the fastest-growing sectors within the digital asset ecosystem. As Bitcoin, Ethereum, and broader cryptocurrency markets continue to attract global attention, more users are looking for intuitive products that allow them to express market views without navigating complex trading strategies.

Unlike conventional leveraged products, Prediction Markets focus on outcome-based participation. Users can forecast whether a specific event will occur, ranging from Bitcoin price movements and major cryptocurrency market trends to industry developments and real-world events. This model creates a

more accessible entry point for users while maintaining a transparent and clearly defined participation process.

According to Hibt, the launch of its Prediction Market product reflects growing demand for alternative trading experiences within the crypto industry.

"Prediction Markets represent a natural evolution of how users engage with financial and digital asset markets," a Hibt spokesperson said. "As the industry matures, users are increasingly seeking products that are easier to understand, more interactive, and closely connected to real-world developments."

Industry analysts have also highlighted the growing role of Crypto Prediction Markets within both centralized and decentralized ecosystems. As market participants seek alternatives to traditional leveraged trading, Prediction Markets are becoming an increasingly important segment of the broader cryptocurrency landscape.

Hibt believes Prediction Markets will become an important gateway for mainstream users entering cryptocurrency markets, providing a simpler alternative to traditional derivatives trading while encouraging broader participation across the digital asset ecosystem.

The newly launched Prediction Market product, available at <https://www.hibt.com/prediction>, is built on Hibt's existing trading infrastructure and settlement framework, with a focus on platform stability, transparent market rules, and user experience. The platform enables users to participate in cryptocurrency market forecasting, event-based trading, and emerging prediction opportunities through a simplified and interactive trading experience.

The company noted that reliability, clear settlement mechanisms, and long-term user trust will remain central to the future development of both Prediction Markets and Event Contract products.

Beyond market forecasting, Hibt sees Prediction Markets as a way to strengthen community engagement by allowing users to participate in discussions around cryptocurrency trends, industry narratives, and major global events through a unified platform experience.

As global interest in event-driven markets continues to grow, Hibt also plans to introduce a range of themed Prediction Market categories tied to major international events.

Through its dedicated Prediction Market portal at <https://www.hibt.com/prediction>, Hibt plans to continuously expand available markets and introduce new event-driven trading opportunities for global users.

With the **2026 FIFA World Cup** approaching, football-related prediction markets are expected to become one of the platform's featured offerings. Users will be able to participate in forecasting activities surrounding match outcomes, tournament progress, team performance, and other major moments throughout the competition.

Hibt believes that combining cryptocurrency market forecasting with globally recognized events can help broaden user participation while demonstrating the versatility of Prediction Market products beyond purely financial markets.

By connecting digital asset trading with real-world events, sports, and global narratives, the platform aims to create a more engaging and interactive experience for both crypto-native users and mainstream

audiences entering the digital asset ecosystem.

Industry observers note that major global events such as the FIFA World Cup, national elections, central bank policy decisions, and key cryptocurrency milestones are increasingly becoming important drivers of Prediction Market activity. As interest in event-based forecasting continues to expand, platforms capable of offering diverse and accessible prediction opportunities may be well-positioned to capture the next wave of user growth.

Looking ahead, Hibt plans to continue expanding its Prediction Market and Event Contract offerings, introducing additional cryptocurrency forecasting opportunities, community-driven prediction events, and interactive trading experiences designed for the next generation of digital asset users.

As Prediction Markets continue to gain traction globally, Hibt believes the sector has the potential to become a key component of future digital asset ecosystems, combining market intelligence, social participation, and event-driven trading into a single user experience.

Users interested in exploring Hibt Prediction Market can visit:
