

LanguageCheck.ai Launches TEAM Enterprise; AI-Powered Translation QA Built for Multi-User LSP Workflows

AQRATE S.r.l. introduces its first multi-user tier, bringing role-based access, shared team wallets, and secure external post-editor collaboration to its flagship translation quality platform — starting at €99.99/month for up to 10 users.

Bologna, Italy Jun 24, 2026 (IssueWire.com) - [LanguageCheck.ai](https://www.IssueWire.com), the AI-powered translation quality platform developed by AQRATE S.r.l., today announced the general availability of its TEAM Enterprise subscription — a purpose-built tier for language service providers (LSPs) and translation teams managing multi-user quality assurance workflows.

The new plan extends all Pro-tier capabilities with a collaborative layer that allows team owners to create and manage user accounts across distinct permission levels, invite external post-editors via secure link, and maintain full oversight of the team's word wallet and active checks, without disrupting the underlying CAT-based workflow.

"Translation QA has always been a team responsibility, but the tools have forced it into a single-user process," said Marco Baglioni, CEO of AQRATE S.r.l. "TEAM Enterprise gives project leads the architecture to match how LSPs actually operate, with different people playing different roles, including external linguists who need controlled access to a single check without touching anything else."

Role-Based Access Across the Entire QA Workflow

TEAM Enterprise introduces five distinct access roles, each mapped to a specific function within the

LSP workflow:

Owner

Full team control: add/remove members, purchase words for the team wallet, view and manage all checks, run checks, and invite external collaborators.

Business Manager

Team and budget oversight: add/remove members, buy words, view all checks, run checks, and invite external collaborators.

Project Manager

Manage team membership, purchase words, oversee all checks, run checks, and invite external collaborators to individual projects.

Member

Operational access: run checks using the team wallet and invite external collaborators to individual checks.

External Collaborator

Scoped post-editing access: invited via link to view check details and perform post-editing within a guided, controlled environment.

External Post-Editor Access via Secure Link

A defining feature of the TEAM Enterprise plan is its approach to external collaboration. Rather than requiring outside linguists to create accounts or navigate the full platform, team members can invite external post-editors to a single check by sharing a secure link. External collaborators access a guided post-editing environment scoped exclusively to that check — preserving workflow integrity while removing onboarding friction.

Shared Team Wallet

Word credits are pooled into a shared team wallet managed by Owners, Project Managers, and Business Managers. Members draw from the same pool to run checks, giving finance and operations leads full visibility over consumption without requiring individual billing accounts per user.

Pricing and Availability

TEAM Enterprise is available now in two subscription formats:

Yearly plan: €99.99/month, billed annually (+ taxes) — includes up to 10 users. Best for growing teams.

3-Year plan: €2,599.00 billed once per three years (+ taxes) — includes up to 10 users.

Custom plans: Available for teams exceeding 10 users. Contact LanguageCheck.ai directly to discuss tailored arrangements.

All TEAM Enterprise plans include the full Pro feature set: AI-powered quality checks grounded in MQM and ISO 5060 standards, processing at up to 1,000 words per minute, helping users save on average around 70% of post-editing time and costs, with support for XLIFF, SDLXLIFF, MQXLIFF, XLF, TXLF, and MXLIFF formats across any language pair.

Data security is enterprise-grade throughout: 256-bit HTTPS encryption, storage within Google Cloud Platform data centers, and a strong security policy under which uploaded translations are never used to train AI models and are automatically deleted after 30 days, unless deleted earlier by the customer. The platform operates under a Quality Management System aligned with UNI EN ISO 9001:2015.

LSPs interested in upgrading or launching with TEAM Enterprise can visit languagecheck.ai or contact the team directly for custom pricing inquiries.

About LanguageCheck.ai

LanguageCheck.ai is an AI-powered translation quality platform developed by AQRATE S.r.l. (Bologna, Italy). Built on years of expertise in text analysis, translation memory optimization, and AI-driven inspection, the platform enables LSPs and corporate translation teams to perform rigorous quality checks on human and machine translations without disrupting existing CAT-based workflows. LanguageCheck.ai processes XLIFF and all major CAT format variants, supports every language pair, and delivers results at up to 1,000 words per minute.
