

MenoVerse Delivers Concierge Menopause Care in California with On-Demand Telehealth Support

Nine Meds vs One Patch

Los Angeles, California Jun 9, 2026 ([IssueWire.com](https://www.issuewire.com)) - MenoVerse, a telehealth service currently servicing patients in California, provides concierge menopause care through personalized, on-demand support from expert telehealth providers in hormone health, menopause, sexual wellness, and beyond. The service is designed to help patients take control of their menopause journey.

[Concierge menopause care in California](#) sits at the center of the MenoVerse experience, which positions the service as a trusted confidant for patients navigating perimenopause and menopause. MenoVerse aims to take patients from overwhelmed to empowered with seamless, on-demand care, connecting them with expert practitioners who specialize in hormone health and lead with the most up-to-date science—eliminating long appointment waits and travel.

The MenoVerse experience follows three simple steps. Patients begin by taking a short questionnaire that takes under a minute to determine whether MenoVerse is right for them. Next, they select between the personalized MenoCustom or MenoBasic packages. Finally, they meet with an expert provider through an instant or scheduled consult to begin a custom protocol delivered straight to their door.

MenoVerse also offers treatment enhancements that complete a patient's journey. These include Testosterone with lab work, available to California patients, with labs included under the MenoCustom package. Additional enhancements include an Anti-Aging Cream, the Rejuvenate Hyaluronic Acid Vaginal Suppository, and OOOHHH! Orgasm Enhancing Cream.

To consult with a doctor, patients choose a plan and are directed to the online medical team, which guides them through a brief intake form to help determine the best treatment plan. Medical professionals remain available to support patients throughout their journey, and patients can reach out at any time through their account.
