

New WholeClear vCard Duplicate Remover Launches to Streamline Contact Management for Windows Users

An automated Windows utility to quickly scan, filter, and eliminate duplicate contacts from VCF files in bulk.

, **Canada Jun 3, 2026** ([Issuewire.com](https://www.issuewire.com)) - Managing digital address books has become a whole lot easier thanks to the official launch of the vCard Duplicate Remover. This lightweight, high-performance Windows utility is designed to get rid of identical or repetitive contacts from VCF files without any risk of data loss.

As digital networks grow, professionals and everyday users frequently accumulate duplicate contact files when merging address books from various platforms like Outlook, Gmail, iCloud, Android, and iPhone. Sorting through hundreds, if not thousands, of contacts manually is tedious and prone to human error. The [WholeClear vCard Duplicate Remover](#) offers a complete solution that helps users to scan, find and delete duplicate entries in bulk.

The utility is designed for safety and efficiency and runs as a standalone without the need to install any third-party applications to run. During the deduplication process all original contact metadata is preserved, so key information such as names, phone numbers, e-mail addresses, profile images, logos and URLs are all fully intact.

The Main Features of the Software are:

- **Dual Processing Modes:** Users can upload a single VCF file or import a whole folder to delete duplicates in batch. There are no limitations on the data processing in terms of size or quantity.

- **Universal Platform & Version Support:** Supports all major vCard file versions (2.1, 3.0, 4.0 and more) generated by Skype, Google Contacts, Outlook and mobile operating systems.
- **Targeted Folder Selection:** Enables users to selectively target specific folders for removal of duplicates or to conduct a scan across the entire data set.
- **User-Directed Output Paths:** Cleaned VCF files can be saved directly to a user-specified destination directory, avoiding accidental overwrites.
- **Complete Windows Compatibility:** The program is fully optimized to run on both 32-bit and 64-bit editions of Windows, including Windows 11, 10, 8.1, 8, 7, and older versions such as XP and Vista.

Availability and Pricing

You can also download the free trial version of the software now and see for yourself by scanning your VCF directory and checking the existing duplicates. Users can easily upgrade to a licensed edition to export the fully De-duplicated VCF files.
