

ProustMe Accepted into the NVIDIA Inception Program

AI-Powered Narrative Intelligence Platform Advances Mission to Structure Human Experience and Transform It into Narrative Capital

Shreveport, Louisiana Jun 10, 2026 ([IssueWire.com](https://www.issuewire.com)) - ProustMe, an AI-powered narrative intelligence platform focused on preserving, structuring, and deriving meaning from human experience, today announced its membership in the NVIDIA Inception program, a program designed to help startups accelerate innovation and growth.

ProustMe is developing what it believes to be the world's first AI-native framework for organizing human experience at scale. Through a combination of artificial intelligence, structured storytelling, and personal knowledge systems, the platform enables individuals to transform memories, reflections, relationships, life events, and personal narratives into what the company calls Narrative Capital.

The company's vision is rooted in a simple but ambitious premise: human experience may be one of the world's largest and most valuable unstructured datasets.

"Artificial intelligence has transformed the way we create, access, and organize information," said Mark Bolding, Founder and CEO of ProustMe. "We believe the next frontier is helping humanity better understand itself. Our mission is to preserve, structure, and derive meaning from human experience, creating a foundation for what we call The Internet of Us."

Every day, billions of people generate experiences, observations, lessons, relationships, triumphs, and setbacks. Yet most of this information remains fragmented across memories, photographs, journals, conversations, social platforms, and personal archives. ProustMe is developing AI-powered systems designed to organize these experiences into structured, searchable, and enduring knowledge.

The company has introduced several concepts that support this vision, including Narrative Capital, Proustian AI, Bespoke Media, and The Internet of Us. Together, these ideas form the foundation of a broader effort to create infrastructure for human understanding in the age of artificial intelligence.

Membership in the NVIDIA Inception program provides ProustMe with access to technical resources, educational opportunities, and a global ecosystem of startups advancing innovation through AI and accelerated computing.

Founded in Shreveport, Louisiana, ProustMe represents a new category of AI applications focused not on generating more content, but on helping people better understand the experiences that shape their lives.

“As AI becomes increasingly capable of generating information, meaning becomes more valuable,” Bolding added. “We believe the future belongs not only to systems that create knowledge, but to systems that help people discover wisdom within their own experiences.”

About ProustMe

ProustMe is an AI-powered narrative intelligence platform dedicated to helping individuals preserve, organize, and derive meaning from their life experiences. By combining artificial intelligence with structured personal storytelling, ProustMe transforms memories, reflections, and life events into Narrative Capital, creating a richer understanding of identity, legacy, and human experience.
