

Titian Karsa Mandiri Advances Professional ISPO Auditor Training

Titian Karsa Mandiri Fosters the Development of Professional ISPO Auditors Through a Comprehensive and Practice-Oriented Training Program

Jawa Barat, Indonesia Jun 30, 2026 ([Issuewire.com](https://www.issuewire.com)) - PT Titian Karsa Mandiri (TKM) successfully conducted the Indonesian Sustainable Palm Oil (ISPO) Auditor Certification Training Program as part of its commitment to strengthening human resource competencies within Indonesia's palm oil plantation sector.

The training was delivered in two phases, beginning with online sessions held via Zoom on 5–6 June 2026, followed by in-person training from 8–11 June 2026 at Royal Amaroossa Hotel, Bogor. The program brought together participants from various professional backgrounds involved in the implementation, monitoring, and assessment of sustainability standards within the palm oil industry.

Designed to provide a comprehensive understanding of ISPO principles and criteria, the program covered auditing techniques, standard interpretation, and management system implementation to support sustainable plantation practices.

Throughout the training, participants were guided by experienced trainers and industry practitioners with extensive expertise in certification, auditing, and sustainable palm oil governance. In addition to

theoretical learning, the program emphasized practical application through case studies, interactive discussions, and audit simulations that closely reflected real-world conditions.

As part of the practice-based learning approach, participants also took part in a field audit simulation at PTPN IV Regional II – Cikasungka Estate, Bogor. This field exercise provided valuable hands-on experience, allowing participants to observe and understand audit processes directly within a plantation operation. Activities included document reviews, field observations, interviews, and verification of ISPO standard implementation.

Through this practical experience, participants gained deeper insights into conformity assessment, identification of potential audit findings, and the development of relevant corrective recommendations.

The training program received positive feedback from participants. One of the attendees, Wahyu, Head of the Plantation Office of Central Kalimantan Province, expressed his appreciation for the comprehensive learning experience provided by PT Titian Karsa Mandiri through the integration of online learning, classroom sessions, and field-based practice.

"This training program effectively facilitated participants' learning needs, from the delivery of training materials and discussions to the field audit simulation, which provided a realistic understanding of ISPO audit implementation. The program offered valuable knowledge and a highly positive learning experience. I hope PT Titian Karsa Mandiri becomes increasingly recognized throughout Indonesia so that it can continue contributing to the improvement of Indonesia's palm oil plantation governance in a more professional and sustainable manner," said Wahyu.

The combination of online learning, classroom instruction, and field practice is expected to provide a more comprehensive learning experience and strengthen participants' readiness to perform auditing functions professionally.

ISPO Auditor Certification Training represents one of the key competency development initiatives aimed at supporting the implementation of sustainability standards within Indonesia's palm oil sector. Strengthening auditor capacity is considered essential to ensuring that ISPO principles are implemented effectively, consistently, and in accordance with applicable regulations.

PT Titian Karsa Mandiri remains committed to delivering industry-oriented training programs that combine theoretical knowledge with practical field experience. In addition to the ISPO Auditor Certification Training Program, TKM also offers various competency development programs, including ISPO Training, Internal Control System (ICS) Training, Certification Training, Cultivation Training, Harvest and Post-Harvest Training, Oil Palm Plantation Mapping Techniques Training, and Oil Palm Cultivation Techniques Training.

Through these initiatives, TKM aims to contribute to the development of competent and professional human resources capable of supporting a sustainable, competitive, and responsible Indonesian palm oil industry.
