

As AI-Generated Apps Raise Security Concerns, WyberAi Scans Every Build Before It Goes Live

Signalpulse Technologies' AI platform generates production-ready code, ships native mobile apps from the same prompt, and scans every build for security flaws — so non-engineers can go from idea to live product in minutes.

Sheridan, Wyoming Jul 6, 2026 ([Issuewire.com](https://www.issuewire.com)) - Signalpulse Technologies today spotlighted a capability that sets its AI app builder, [WyberAi](#), apart from the fast-growing field of "prompt-to-app" tools: a live database [security scan](#) that runs automatically on every build, probing the generated app the way an attacker would and flagging exposed data before the app goes live.

WyberAi lets anyone describe a web or mobile app in plain English and receive production-ready React code that is deployed to a live URL in minutes. Unlike most AI builders, which generate web apps only, WyberAi also produces a real native mobile app for iOS and Android from the same prompt. The security scan addresses a well-documented risk in AI-generated software, where misconfigured database permissions can quietly expose user data.

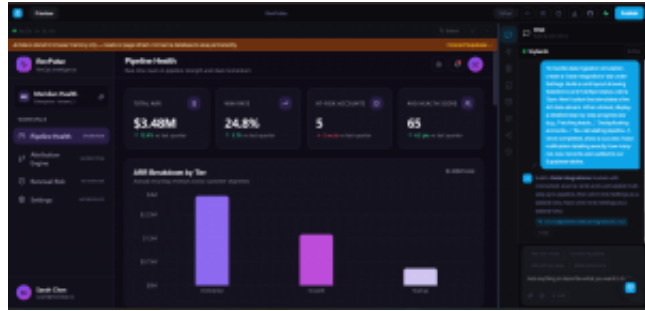

"AI can build an app in minutes, but it can also ship one that leaks data in minutes — and most tools leave that entirely to the user," said Sumeet Sutar, Founder and CEO of Signalpulse Technologies, who started the company after ten years in corporate marketing and sales across cybersecurity, cloud, and SaaS. "We built WyberAi so anyone can go from idea to a real, deployed product — on the web and on mobile — without giving up on security to get there."

Each WyberAi project ships with one-click deployment, GitHub sync, custom domains, full source-code export, and more than 27 integrations including Supabase, Stripe, and OpenAI, so the output is an ownable codebase rather than a locked-in sandbox. WyberAi is available now with a free tier of 50 credits per month and no credit card required.

About Signaltpulse Technologies LLC

Signalpulse Technologies LLC is a software company headquartered in Sheridan, Wyoming, building AI products that help founders, marketers, and operators execute faster. Its flagship product, WyberAi, is an AI app builder that turns plain-English prompts into production-ready web and mobile apps. Learn more at <https://wyberai.com>.
