

Mango AI Offers a Video Face Swap Generator for Easy Face Replacements

Mango AI's video face swap generator helps users create face-swapped videos and provides multiple options for sharing the generated content.

Hong Kong, Hong Kong S.A.R. Jul 29, 2026 ([Issuewire.com](https://www.issuewire.com)) - Mango AI, developed by Mango Animate, offers a [video face swap](#) generator that enables users to replace faces in videos with smooth and realistic results. The tool provides a practical way to create face-swapped content for entertainment, education, marketing, and personal projects without requiring advanced video editing skills. By combining original videos with target face images, the video face swap generator helps users explore new possibilities for personalized video creation.

Creating content with the video face swap generator requires only an original video and a target image containing the desired face. Users can upload a video containing a face along with a target photo in JPG, JPEG, PNG, or WebP format. The tool supports videos up to 1 minute and 30 seconds in length with a maximum file size of 50 MB. After uploading the materials, users can generate a face-swapped video with the target face integrated into the original footage.

The video face swap generator also provides sample videos for users who want to experience the face-swapping process before preparing their own materials. After clicking the generate button, the creation task continues running in the background, allowing users to work on other tasks while waiting for the video to be completed. This workflow gives users more flexibility when creating AI-generated videos online.

Generated videos can be shared through various channels. Users can download the videos, share them through direct links, or create QR codes for quick access. The tool also supports direct sharing to platforms such as Facebook and X, as well as embedding videos on websites or blogs for broader distribution.

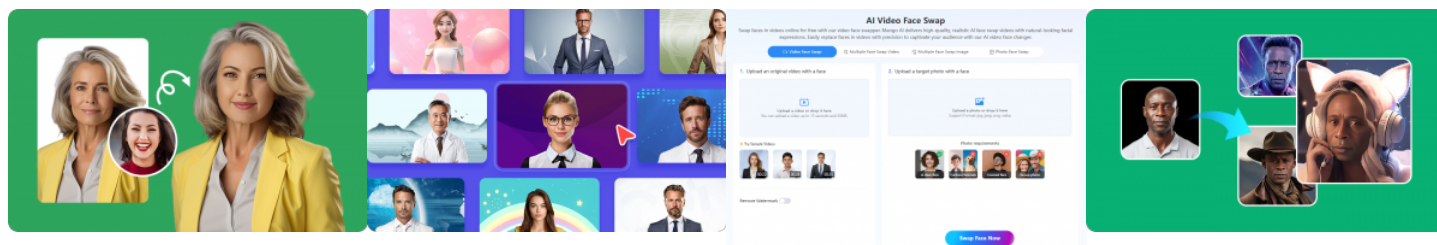

For projects that involve multiple characters, Mango AI also provides a [multiple video face swap](#) creator. Users can upload a video containing multiple faces, and the tool automatically detects each face in the footage. Users can then upload target images for each detected face to create a multiple face swap video. The feature helps users create group face swap videos for storytelling, creative projects, and other scenarios that require multiple face swaps.

"The video face swap generator gives creators a practical way to replace faces in videos and create personalized content, while the background processing and flexible sharing options support a more convenient creation workflow," said Winston Zhang, CEO of Mango Animate.
