

Triple Plus (TPT) Goes Live: Decentralized Trade Finance Platform Opens to Public

Singapore, Singapore Jul 8, 2026 ([Issuewire.com](https://www.issuewire.com)) - Triple Plus Global Pte. Ltd., a Singapore-incorporated blockchain company, today announced the official public launch of the Triple Plus platform, a decentralized trade finance infrastructure built on Polygon that enables businesses to access liquidity from real-world receivables while providing investors with yield opportunities backed by commercial cash flows.

Bridging the Trade Finance Gap

The global trade finance market represents approximately \$10 trillion in annual activity, yet an estimated \$2.5 trillion gap exists between what businesses need and what traditional financial institutions provide. Small and medium enterprises routinely wait 30 to 180 days for payment on valid invoices and purchase orders, creating cash flow constraints that limit growth and force businesses to turn down opportunities.

Triple Plus addresses this gap by building open, transparent, on-chain infrastructure for trade finance, removing intermediaries, reducing costs, and making liquidity accessible to businesses that traditional factoring has historically excluded.

Platform Now Live

With today's launch, users can access two core features on the Triple Plus platform:

P2P OTC Trading allows users to trade TPT tokens directly through smart contract escrow, with no intermediaries. Makers create orders, takers fill them, and settlement is executed automatically on-chain. The result is a transparent, trustless trading experience that puts users in full control of their assets.

Swap Staking enables TPT holders to earn rewards by participating in the platform ecosystem. Users who stake TPT gain access to platform benefits including fee discounts and priority access to future product features as the Triple Plus ecosystem expands.

Built for What's Next

The public launch marks the beginning of Triple Plus's product roadmap. The Invoice Factoring Marketplace, currently in development, will allow businesses to list unpaid invoices on the platform at a discount, with investors purchasing those invoices and earning yield at maturity. Supply Chain Finance and a full Trade Finance Platform are planned for subsequent releases, extending the protocol's reach across the full spectrum of commercial receivables.

Smart contracts have been deployed on Polygon and audited by CertiK, with the project listed on [CertiK Skynet](#) for ongoing security monitoring. Triple Plus is listed on CoinMarketCap.

About Triple Plus

Triple Plus Global Pte. Ltd. is a Singapore-incorporated company building decentralized trade finance infrastructure on Polygon. The TPT token has a fixed supply of 500,000,000 with no inflation, designed to align incentives across the platform ecosystem.
