

Two AI-First Venture Factories Launch to Build the Autonomous-Company Era - ALIENTELLIGENCE

Co-founded by Bo Gregorix (Greg), Hyper[AI]gent Studio and Co-Cre[AI]te & Co-Cre[AI]tor Labs pair autonomous agent fleets, seed capital, and human founders to design companies that operate themselves one built for founders, one built for corporations

Co-Cre[AI]te Labs

Menlo Park, California Jul 2, 2026 ([IssueWire.com](https://www.issuewire.com)) - Two sister ventures launched today around a single thesis: the era of the autonomous company has arrived. **Hyper[AI]gent Studio**, an AI-first venture factory building autonomous startups, and **Co-Cre[AI]te & Co-Cre[AI]tor Labs**, an AI-first co-working and co-creation venture factory building autonomous businesses, were co-founded by entrepreneur **Bo Gregorix** to make it possible to start and run a company with a fleet of AI agents and a handful of people.

"Software companies no longer need to be big to be ambitious." **Bo Gregorix (Greg)** · Co-Founder, Hyper[AI]gent Studio & Co-Cre[AI]te Labs

"We're building for a world where a founder with real conviction, a fleet of agents, and a little capital can stand up a company that runs itself," said Gregorix. "Hyper[AI]gent is the factory; Co-Cre[AI]te is the room where anyone — from a solo builder to a Fortune 500 team — can come co-create one."

Two front doors to the same future

The two ventures share infrastructure and a worldview but serve different audiences. Hyper[AI]gent Studio forges and operates autonomous startups in-house, while Co-Cre[AI]te & Co-Cre[AI]tor Labs opens the same tools, agents, and playbooks to outside builders and organizations.

Inside Hyper[AI]gent Studio

The studio is organized around three pillars:

- **The Agent Fleet** — a core crew of autonomous operating agents (ATLAS for orchestration, VANTA for growth, SENTRY for operations, and LEDGER for finance) that every venture inherits and that run day-to-day operations around the clock.
- **Ide[AI]te Ventures** — a AI-first seed-venture fund writing first checks into AI-native startups, both studio spin-outs and outside founders.
- **Im[AGI]ne Builders** — a founders-in-residence program that pairs AI-native founders and co-founders with agent crews, capital, and operators.

To date, the studio reports more than 1,024 agents in production across 14 ventures, and \$128M in ALIENTELLIGENCE portfolio Valuations.

Inside Co-Cre[AI]te & Co-Cre[AI]tor Labs

The Labs is part co-working space, part venture studio. Individuals join to co-create businesses they own. The Labs also offers two firm-facing programs: the **Inspir[AI]tion Workspace**, an AI-first co-creation workspace that embeds corporate teams with operators and agent crews; and **Deep Br[AI]n Consultants**, a high-ticket implementation practice that moves firms from scattered knowledge to structured AI memory vaults. The community reports 240+ members and 38 businesses launched.

"The best co-founder you'll ever have might not be a person." **Bo Gregorix (Greg)** · Co-Founder

"Our job is to put agents, capital, and craft in one room," Gregorix added, "and let people build things that used to take a hundred employees."

Availability

Hyper[AI]gent Studio is accepting founder pitches and applications to the Im[AGI]ne Builders residence, and is deploying its Ide[AI]te Ventures seed fund now. Co-Cre[AI]te & Co-Cre[AI]tor Labs is open for memberships, corporate Inspir[AI]tion Workspace engagements, and Deep Br[AI]n Consultants implementations.

AboutHyper[AI]gent Studio

Hyper[AI]gent Studio by is an AI-first venture factory building autonomous startups — software companies operated by supervised fleets of agents and steered by a small core of operators. Its pillars include the Agent Fleet, the \$40M Ide[AI]te Ventures seed fund, and the Im[AGI]ne Builders founders-in-residence program.

AboutCo-Cre[AI]te & Co-Cre[AI]tor Labs

Co-Cre[AI]te & Co-Cre[AI]tor Labs is an AI-first co-working and co-creation venture factory building autonomous businesses. Members pair with operators and AI crews to build companies they own, corporate teams engage through the Inspir[AI]tion Workspace, and firms modernize their institutional knowledge into structured AI memory vaults through Deep Br[AI]n Consultants.
