

## **XTDiagnostics Launches AI-Powered Equipment Diagnostic Platform to Help Businesses Reduce Downtime and Repair Costs**

Orland Park, Illinois Jul 3, 2026 ([IssueWire.com](https://www.IssueWire.com)) - XTDiagnostics Launches AI-Powered Equipment Diagnostic Platform to Help Businesses Reduce Downtime and Repair Costs

XTDiagnostics, an innovative technology platform designed for commercial equipment owners and

service professionals, today announced the launch of **XTDiagnostics.com**, an AI-powered diagnostic and troubleshooting platform built to help users quickly identify equipment issues, locate possible solutions, and reduce costly downtime.

The platform was created with a simple mission: make equipment diagnostics more accessible, faster, and more affordable for everyone—from restaurant owners and maintenance managers to technicians and equipment operators.

Commercial equipment failures can lead to lost revenue, operational disruptions, and expensive service calls. XTDiagnostics uses artificial intelligence to provide users with:

- Equipment fault code assistance
- Troubleshooting guidance
- Possible causes of equipment failures
- Step-by-step repair suggestions
- Equipment tag identification tools
- Access to instructional resources when available

"Our goal is not to replace technicians, but to empower them and the businesses they serve," said John Mihalos, Founder of XTDiagnostics. "Too often, equipment owners spend valuable time and money simply trying to determine what is wrong with a machine. We believe technology can bridge that gap and provide answers faster."

The platform currently supports a wide range of commercial equipment categories, including:

- Commercial kitchen equipment
- Restaurant equipment
- Forklifts and pallet jacks
- Refrigeration systems
- Ice machines
- Dishwashers
- Fryers
- Ovens and cooking equipment
- Food processing equipment

XTDiagnostics also offers a free AI-powered equipment tag reader that allows users to upload equipment information and receive assistance identifying their equipment and possible solutions.

As part of its launch, XTDiagnostics is inviting business owners, technicians, and equipment operators to join the platform, provide feedback, and help shape the future of equipment diagnostics.

"We are building this platform with the industry, not just for the industry," added Mihalos. "Every suggestion and every user experience helps us improve and create something that delivers real value."
