

ZeroGPT Plus Releases Advanced AI Content Detection and Probability Analysis Tool

Chandler, Quebec Aug 2, 2026 ([IssueWire.com](https://www.IssueWire.com)) - ZeroGPT Plus today announced the launch of a significant upgrade to its AI content detection platform, introducing enhanced AI text probability analysis with improved speed, greater accuracy, and more detailed sentence-level reporting. The upgraded solution helps identify AI-generated content created with leading language models, including ChatGPT, GPT-5, Gemini, and Claude.

As AI-generated content becomes increasingly common across education, business, and digital publishing, the need for reliable AI detection continues to grow. The latest version of ZeroGPT Plus enables users to analyze both pasted text and uploaded documents, delivering comprehensive AI probability reports within seconds while providing clear insights into individual sentences.

The upgraded analyzer generates an overall AI probability score alongside visual sentence-level highlights, allowing users to quickly identify sections that may appear AI-generated. This level of detail helps writers, students, educators, editors, and businesses better understand how their content is evaluated before publication or submission.

Unlike traditional plagiarism checkers that compare matching text, ZeroGPT Plus analyzes writing patterns, language structure, and statistical indicators commonly associated with AI-generated content. This approach provides users with a more comprehensive assessment of originality while supporting responsible AI use.

"Our latest platform update is focused on delivering faster and more accurate AI detection while giving users greater transparency into how their content is analyzed," said Sue Wang, Head of Product at ZeroGPT Plus. "We are committed to providing practical tools that help individuals and organizations confidently evaluate written content."

The update also introduces an enhanced editing workflow that allows users to review flagged passages and improve originality through intelligent rewriting suggestions. By refining selected sections, users can produce more natural, authentic writing while reducing AI detection scores more efficiently.

ZeroGPT Plus continues to provide accessible AI detection tools without requiring registration for basic scans, making advanced content analysis available to students, professionals, educators, researchers, and organizations worldwide.

About ZeroGPT Plus

ZeroGPT Plus is an AI-powered content analysis platform that helps individuals and organizations evaluate written content for AI-generated patterns. The platform offers fast AI detection, detailed reporting, and intuitive editing tools designed to support originality, transparency, and content quality across academic, professional, and creative environments.
