

ZS Bulk Bags Exhibits at the 16th Xinjiang International Mining Expo in Urumqi | Booth No.120

Yantai, Shandong Sheng Jul 16, 2026 ([IssueWire.com](http://www.issuewire.com)) - As the core gateway connecting China's northwest mining industry and Central Asian mineral resource markets, the 16th China Xinjiang International Mining & Equipment Expo grandly opens at Xinjiang International Convention & Exhibition Center in Urumqi from July 16 to 18, 2026. This influential Belt and Road mining event gathers mining operators, mineral processing factories, chemical raw material suppliers, and bulk packaging purchasers from Xinjiang, inland China, Kazakhstan, Uzbekistan, Kyrgyzstan, Russia and other Central Asian countries, covering the whole industrial chain of mineral exploration, ore dressing, mineral deep processing and bulk material transportation. ZS Bulk Bags is honored to attend this expo as a professional vertical-integrated FIBC manufacturer, and we welcome all industry partners to visit our **Booth No.120** for face-to-face communication, sample viewing and packaging solution consultation.

For mineral and carbon material enterprises in Xinjiang and Central Asia, inferior mining bulk bags have long been a common operational pain point: ordinary jumbo sacks suffer from fabric abrasion, seam cracking, mineral powder leakage, insufficient load-bearing capacity and poor dust-proof performance during long-distance land transit and outdoor stockpiling, which leads to material loss, environmental pollution and hidden safety hazards for mine production. Targeted at the harsh transportation and storage environment of mineral granules, fine ore powder, petroleum coke, copper concentrate and limestone, ZS Bulk Bags develops a full range of heavy-duty mining FIBC products specially optimized for mining scenarios, which will be fully displayed at Booth 120.

Our star mining FIBC series includes cross-corner X-base bulk bags with 2 lifting loops, duffle top + bottom discharge spout jumbo sacks, anti-static Type C conductive FIBC for flammable mineral dust, leak-proof bulk bags with cotton sealing strips, breathable agricultural & mineral sacks, and baffle form-stable bags. All mining-grade FIBCs are produced with virgin high-tensile PP woven fabric self-woven in our circular loom workshop, with customizable safety load from 1 ton to 2 tons, reinforced multi-layer stitching and anti-abrasion treatment to adapt to repeated forklift lifting, long-distance highway haulage and open-air stockpile storage in Xinjiang's high ultraviolet environment.

Different from single finished bag suppliers, our full vertical production chain enables us to provide two core product lines for mining customers: customized industrial FIBC bulk bags and separate rolls of high-quality PP woven base fabric for local packaging factories in Xinjiang and Central Asia. With dual manufacturing bases in China and South Asia, we guarantee stable mass delivery, flexible small-batch trial orders and localized after-sales technical support for Northwest China and Central Asian mineral buyers, effectively solving the supply chain instability troubles that plague most regional mining enterprises.

During the 3-day exhibition, our professional technical and sales team will stay at Booth 120 to provide one-stop services including on-site product sample display, load resistance test data sharing, personalized FIBC structural design scheme matching, factory quotation negotiation and free sample arrangement. We sincerely invite mine owners, mineral purchasing managers, bulk cargo logistics operators and packaging distributors from Xinjiang and all Central Asian countries to come to Booth 120, discuss long-term stable bulk packaging cooperation, and explore cost-saving, high-durability FIBC solutions suitable for local mineral transportation conditions.

Exhibition Name: The 16th China Xinjiang International Mining and Equipment Expo

Date: July 16-18, 2026

Venue: Urumqi Xinjiang International Convention and Exhibition Center

Corporate booth: No. 120
