

Cherrie Business Solutions Launches UAE E-invoicing Solution for Microsoft Dynamics 365

The Dubai IT consultancy introduces automated PINT-AE compliance tools to help enterprises connect their ERP systems before the 2026 tax deadlines.

Dubai, United Arab Emirates Aug 21, 2026 ([Issuewire.com](https://www.issuewire.com)) - Cherrie Business Solutions, a leading digital transformation agency, has officially announced the launch of its dedicated [UAE E-invoicing solution](#) for Microsoft Dynamics 365. This newly released integration framework empowers large organizations across the Emirates to automate their financial reporting and achieve full compliance with the Federal Tax Authority ahead of the upcoming regulatory deadlines.

As the government pilot phase progresses through August 2026, large taxpayers are operating on a compressed timeline. Phase 1 businesses generating AED 50 million or more in annual revenue are legally required to formally appoint an Accredited Service Provider by October 30, 2026. The full mandate goes live on January 1, 2027. Under this Decentralised Continuous Transaction Controls

model, traditional paper invoices and static PDFs are completely eliminated. Finance departments must transition to issuing highly structured PINT-AE XML data files across a secure Peppol network.

Adapting to these strict global data standards presents a significant technical hurdle for enterprise IT departments. To resolve this, Cherrie Business Solutions engineered a custom architecture that links natively with Microsoft Dynamics 365 Finance and Business Central. The specialized framework automatically translates standard accounting ledger data into the precise XML format mandated by the government. It perfectly maps all 51 mandatory billing fields, ensuring that digital tax documents pass network validation instantly without manual data entry.

"Integrating a compliant tax architecture into a live ERP system requires absolute technical precision," said Sulthan Alavudeen, CEO and Founder of Cherrie Business Solutions. "Our automated compliance tools allow enterprise finance teams to operate without disruption. By embedding the PINT-AE data rules directly into the Microsoft ecosystem, we help our clients eliminate network rejections, speed up vendor payments, and prevent the severe administrative penalties associated with noncompliance."

The newly launched software suite addresses the most complex billing scenarios required by the local Middle Eastern market. It includes automated data mapping for multi-currency transactions, ensuring foreign currency invoices dynamically fetch official Central Bank exchange rates. The system also manages strict UUID reference linking for electronic credit notes and configures inverted data routing for buyer-created self-billing arrangements. Once the XML file is generated, the system establishes a secure two-way API handshake with an Accredited Service Provider, completing the five-corner exchange model seamlessly.

Cherrie Business Solutions is currently onboarding enterprises for immediate deployment and sandbox testing. By upgrading their software environments today, businesses can leverage the ongoing pilot phase to test their master data integrity, train their accounts receivable teams, and secure a resilient financial operation for the future.

About Cherrie Business Solutions: Cherrie Business Solutions is a premier digital transformation and IT consulting firm headquartered in Dubai, United Arab Emirates. Specializing in Microsoft Dynamics 365 Finance, Business Central, and custom cloud enterprise architectures, the company delivers scalable software solutions that modernize financial processes. The firm guides organizations through comprehensive data audits, system configurations, and automated tax compliance strategies to ensure seamless digital operations across the GCC region.
