

Dentistry Automation Advances AI-Powered Revenue Cycle Management for Dental Practices

The company is expanding its focus on AI-powered payment posting, insurance verification, claims tracking, and denial management.

Dentistry Automation

Minnetonka, Minnesota Aug 18, 2026 ([Issuewire.com](https://www.Issuewire.com)) - [Dentistry Automation](#) is advancing its focus on [AI-powered Revenue Cycle Management \(RCM\)](#) automation for dental practices and dental support organizations (DSOs), with solutions designed to automate key revenue cycle workflows including payment posting, insurance verification, claims tracking, and denial management.

Dental revenue cycle operations often involve repetitive administrative processes that require teams to work across insurance information, claims, payments, and denial workflows. Dentistry Automation is focused on applying AI to these operational processes so dental organizations can reduce manual work while maintaining greater consistency across their RCM workflows.

The company's AI-powered platform supports multiple areas of the [dental revenue cycle](#). AI payment posting helps automate the processing and posting of insurance payments. AI insurance verification supports the process of gathering and validating insurance information. AI claims tracking helps organizations monitor claims throughout the revenue cycle, while AI denial management focuses on identifying and managing denied claims and the workflows associated with them.

Rather than positioning automation as a replacement for every human decision, Dentistry Automation's approach combines AI-driven workflow automation with human oversight where exceptions or errors require attention. The platform is designed to work within the operational workflows of dental organizations and adapt to the processes and practice management environments they use.

"Revenue cycle management is one of the most operationally intensive areas of a dental organization," said [[RAJEEV BHATIA](#), **FOUNDER & CEO, Dentistry Automation**]. "Our focus is to apply AI where it can take on repetitive RCM work while keeping people involved when judgment or intervention is needed."

The company's current RCM automation focus reflects the growing need among dental practices and DSOs to manage revenue cycle operations efficiently as administrative workloads increase. By bringing AI into payment posting, insurance verification, claims tracking, and denial management, Dentistry Automation aims to help dental organizations create more streamlined and consistent RCM workflows.

Dentistry Automation continues to develop its AI-powered capabilities around the specific operational requirements of the dental industry, with a focus on revenue cycle processes rather than general-purpose automation.

About Dentistry Automation

[Dentistry Automation](#) is an AI-powered dental Revenue Cycle Management automation company focused on helping dental practices and dental support organizations streamline critical RCM workflows. Its solutions include AI payment posting, AI insurance verification, AI claims tracking, and AI denial management.
