

E-Square Alliance Introduces the Universal Panel Door & Enclosure Lockout: A New Solution to the Unlocked Panel Door

New Delhi, Delhi Aug 17, 2026 ([Issuewire.com](https://www.issuewire.com)) - An innovative universal panel door lockout that adds a compliant lock point to panel doors and enclosures that were never designed to accept one. An exclusive product for our OEM partners and distributors to take to market.

Today, E-Square introduced the [Universal Panel Door & Enclosure Lockout](#), a new addition to its energy-isolation range that answers a **long-standing gap in the market**: panel doors and enclosures that cannot be locked. For OEMs and distribution partners, it is a fresh, differentiated product line, and another example of E-Square continually innovating new solutions for its partners.

Electrical panels, switchboards and enclosures are rarely built with a lock point. This leaves a persistent gap in lockout/tagout programmes worldwide: **A properly isolated breaker sitting behind a door that has no way to** accept a padlock. The Universal Panel Door & Enclosure Lockout closes it with a simple, robust idea: two moulded ABS plates sit either side of the door seam, and a single padlock through the aligned lock point holds the door shut.

The device fits in seconds on panels of any make: hinged or non-hinged, single-door or double-door, with factory-applied industrial adhesive tape, with no drilling and no exposure to live parts. It rivets on where a permanent lock point is preferred, accepts one padlock or a hasp for up to six workers, and is designed to support compliance with OSHA 29 CFR 1910.147(c)(5)(ii). A wide-span version extends the same design to junction boxes, wireways, pull boxes and auxiliary enclosures, and vinyl-coated steel cable versions reach lock points a rigid device cannot.

“An unlocked panel door is a problem everyone recognises but few products actually solve. This is a new answer to it, and it’s built to be customised. For OEMs, that means a differentiated line they can specify to length and configuration, and one more reason to keep innovating alongside us.”

Piyush Gulati, Technical Director, E-Square Alliance

Made to be customised

Customisation is central to the range. Cable versions are supplied in 6", 9" and 12" lengths, with any length made to order, and plate span, mounting method and configuration can be tailored to a partner's application or a customer's specific enclosures. For OEMs specifying at volume, that flexibility turns a single device into a family of options that can be matched precisely to each opportunity, without waiting on a bespoke tooling programme.

A pipeline of new products for partners

The launch continues E-Square's pattern of bringing new, market-ready devices to its OEM and distribution partners. Rather than a static catalogue, the aim is a steadily expanding range of energy-isolation solutions. This will give our partners the solution for a gap in the market, with customisation available across the line.

The range

The range includes narrow and wide configurations, along with 6", 9", and 12" cable versions designed to accommodate different panel layouts, enclosure sizes, handles, corners, gauges, and installation requirements. The platform-based design allows OEMs and distributors to select the most suitable configuration for specific applications while benefiting from custom cable lengths, multiple mounting options, and tailored product modifications. This flexibility enables the creation of application-specific solutions without the time and cost associated with developing an entirely new product line.

Availability

The Universal Panel Door & Enclosure Lockout range is available now for global distribution and OEM supply, with custom lengths and configurations made to order. For enquiries, samples or specifications, contact E-Square or visit www.safetylock.net.

Product specifications, installation instructions, technical drawings, and additional configuration details are available on the official product page.

About E-Square

E-Square is a manufacturer of industrial lockout tagout and machine-safety products with 24 years of experience, serving customers across 109 countries. Its energy-isolation devices are designed to support compliance with OSHA 29 CFR 1910.147 and equivalent standards, and are engineered for real-world plant conditions. E-Square is an MSME ZED Gold certified company and a Government of India One Star Export House, and delivers RoSPA- and CPD-accredited [lockout/tagout training](http://www.safetylock.net). Products are manufactured in India and available worldwide through SafetyLock.net.
