Firoth Launches Next-Gen Heated Gloves and Heated Mittens to Keep Outdoor Enthusiasts Warm in Extreme Cold

Stamford, US Aug 29, 2026 (Issuewire.com**)** - *Innovative active heating technology provides targeted hand warmth, wind protection, and ergonomic dexterity for winter sports and daily living.*

As freezing winter conditions set in, maintaining optimal extremity warmth remains one of the greatest challenges for outdoor adventurers, winter sports enthusiasts, and daily commuters. Conventional winter wear often relies on passive insulation that traps moisture and slows peripheral circulation, leading to stiff, cold fingers. Addressing this critical need, leading outdoor thermal wear brand Firoth has officially announced the launch of its updated collection featuring ultra-performance Heated Gloves and high-efficiency Heated Mittens, designed to offer reliable thermal defense without compromising flexibility or comfort.

Advanced Heating Technology for Maximum Extremity Comfort

Firoth's newest lineup of battery-powered handwear integrates micro-thin, flexible micro-alloy heating elements woven along every finger and wrapped around the back of the hand. Powered by ultralight rechargeable lithium-ion batteries, these Heated Gloves quickly raise internal temperatures within seconds of activation. Users can seamlessly adjust heat levels across multiple custom temperature

settings using an intuitive smart-touch controller located on the cuff.

For those facing severe sub-zero temperatures or seeking maximum heat retention, Firoth's premium Heated Mittens consolidate thermal coverage by grouping fingers together while surrounding the hand with dense micro-fleece linings. Both designs feature weather-resistant outer shells crafted from durable, windproof, and water-repellent fabrics that repel snow and rain while ensuring internal breathability.

Tailored for Outdoor Performance and Daily Convenience

Engineered to excel in demanding environments, Firoth Heated Gloves and Mittens incorporate functional design touches such as reinforced non-slip palms for secure gripping, adjustable wrist cinches to seal out cold drafts, and touchscreen-compatible fingertips. Whether skiing down icy slopes, motorcycling, shoveling snow, attending outdoor events, or managing cold morning commutes, the collection guarantees uninterrupted mobility and warmth.

"Hands and fingers are always the first parts of the body to suffer when exposed to freezing temperatures," said a product lead at Firoth. "Our mission with our new Heated Gloves and Heated Mittens is to provide an active, customizable heat solution that allows people to stay outdoors longer, stay comfortable, and continue doing what they love regardless of the weather."

About Firoth

Firoth is a leading provider of premium battery-powered thermal gear dedicated to improving comfort during cold-weather outdoor activities. The brand offers a broad selection of active heating products, including stylish heated vests, jackets, coats, and specialty heated gloves engineered for performance, safety, and durability.
