

Free "Beta Watch" Tracker Reveals Upcoming HighLevel AI CRM Features Weeks Before the Official Changelog

Weekly-updated tracker from Montreal AI marketing specialist documents every feature in private beta, public beta and Labs testing, with advance notice on 35+ upcoming platform capabilities

NETPARTNERS

Montreal, Quebec Aug 23, 2026 ([IssueWire.com](https://www.issuewire.com)) - Agencies and businesses running on HighLevel now have a way to see what the platform will ship before it arrives. Beta Watch, a free tracker published on the [AI Launchkit Guide](#), documents every HighLevel feature currently moving through private beta, public beta and Labs testing, updated weekly with the date each item was first spotted and its expected rollout timeline.

At launch, the tracker covers more than 35 pipeline features, including multi-brand white labeling for SaaS agencies, RCS messaging automation with a general availability target of late Q3 2026, AI prompt optimizers for voice and chat agents, and platform-wide search. Once a feature reaches general availability, the tracker moves it to a shipped section, creating a running historical record of how announcements translate into releases.

The information gap Beta Watch closes is real. Feature previews are typically scattered across weekly livestreams, community channels and beta programs that working agency owners have no time to follow. Missing them has a cost: an agency that learns about a beta feature months late loses the window to request early access, prepare client offers, or plan around a capability that changes its service pricing.

"The platform's own changelog tells you what shipped yesterday. Nothing conveniently tells you what ships next month," said Zoltan Juhasz, the tracker's creator, a Senior Digital Marketer specializing in AI whose Montreal agency NetPartners Marketing serves agency clients across North America and, since

recently, Hungary and France. "Beta Watch is that missing page. Every item has a date on it, and when something changes, we say what changed."

Beta Watch is part of the AI Launchkit Guide, an independent evaluation resource that also publishes monthly release roundups and a [release velocity study](#), recently covered by SalesNexus News under the headline "HighLevel's Weekly Release Velocity Nears 23 Updates, AI Dominates as Largest Category", which found HighLevel publishing 22.7 new-feature announcements per week over a 22-week observation period, with AI the largest category of announcements.

The tracker is editorially independent and not affiliated with or endorsed by HighLevel Inc.

Access the tracker free at the [HighLevel Beta Watch page](#). Editorial insights from the agency are published at [netpartners.marketing](#).

About NetPartners Marketing

NetPartners Marketing is a Canadian marketing agency operated by Agence Vesta Inc. of Montreal, specializing in AI-driven marketing automation for clients in the USA, Canada, Quebec, Hungary and France.
