

GetNorthPath Launches AI-Powered Navigation Platform to Simplify Canadian Permanent Residency Pathways

Next generation digital immigration platform combines real-time data, NOC code matching, and interactive guidance to help international professionals navigate Express Entry and PNP programs.

Toronto, Ontario Aug 18, 2026 ([IssueWire.com](https://www.IssueWire.com)) - GetNorthPath today announced the official launch of its AI-powered immigration platform, designed to bring transparency, clarity, and precision to the Canadian immigration process for skilled international professionals.

Navigating Canadian Permanent Residency (PR), Express Entry, and Provincial Nominee Programs (PNP) often presents significant challenges due to complex criteria, changing draw scores, and confusing classification systems. GetNorthPath addresses these barriers by combining real-time immigration data with intuitive scoring engines and automated National Occupational Classification (NOC) code matching.

Key features of the GetNorthPath platform include:

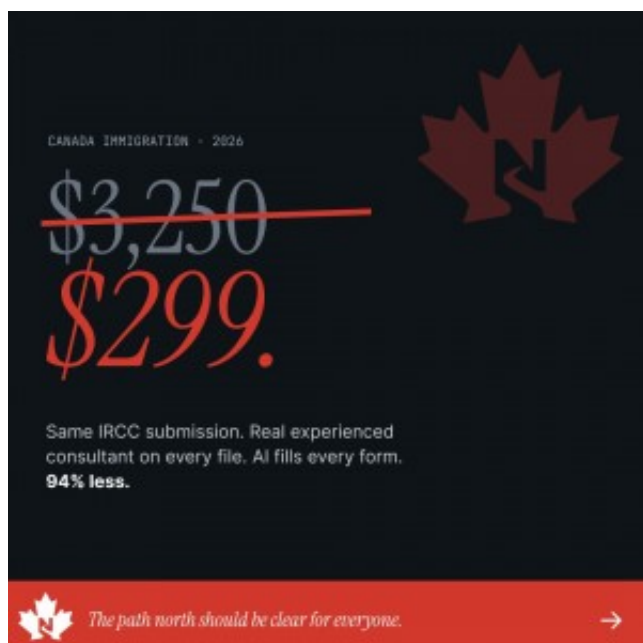

- Comprehensive CRS & PNP Scoring: Instant, accurate evaluation of Express Entry and provincial stream eligibility.
- Automated NOC Code Matching: Intelligent alignment of professional experience with Canadian TEER job categories.
- Scenario Comparison Tools: Interactive modules allowing applicants to visualize how factors like language scores, work experience, and job offers impact overall eligibility.

"Our goal is to eliminate guesswork for prospective immigrants and skilled talent moving to Canada," said the team at GetNorthPath. "By providing data backed estimation tools and clear step by step guidance, we empower candidates to make informed decisions about their immigration journey."

The GetNorthPath platform is now live and accessible to prospective applicants worldwide at <https://www.getnorthpath.com/>.

About GetNorthPath:

GetNorthPath is an AI-driven digital immigration technology platform dedicated to simplifying Canadian visa, work permit, and permanent residency navigation through real-time data and interactive tools.
