

Hyring Launches Insight, an AI-Powered Time Tracking and Employee Monitoring Platform for Distributed Teams

New platform combines AI-driven productivity analytics, automated timesheets, and privacy-conscious monitoring to help distributed and hybrid teams work with greater transparency and trust.

Chennai, Tamil Nadu Aug 5, 2026 ([IssueWire.com](https://www.issuewire.com)) - Hyring, a workforce management technology company known for its [AI Video interviewer](#) used by companies to screen and hire remote talent, today announced the launch of [Insight](#), an AI-powered time tracking and employee monitoring platform built

for distributed and hybrid teams. Together, the two products span the full lifecycle of managing a distributed workforce from AI-driven hiring to day-to-day productivity and attendance tracking. Insight gives HR leaders, agency owners, and remote-first companies real-time visibility into productivity and attendance while automating manual timesheet and payroll workflows.

As remote and hybrid work becomes the norm rather than the exception, organizations are under growing pressure to track productivity accurately without resorting to invasive or opaque surveillance. Insight is designed to close that gap, pairing automated activity and attendance tracking with AI-generated productivity insights that are transparent to both managers and employees.

"Teams today are more distributed than ever, but most of the tools built to manage them were designed for a different era of work," said [Adithyan RK](#), CEO & Co Founder at Hying. "With Insight, we set out to build something that gives leaders the visibility they need to run a distributed team, without turning monitoring into a trust problem. It's time tracking and workforce analytics built for how teams actually work today."

Key features of Insight include:

- Automated time tracking and timesheets - clock-in/clock-out tracking, idle-time detection, and timesheet generation without manual entry.
- AI-powered productivity insights - activity and application-usage analytics that surface productivity trends across individuals and teams.
- Attendance and leave management - unified attendance records, leave requests, and approvals in a single dashboard.
- Employee monitoring with transparency controls - screenshot and activity monitoring configurable to match company policy and regional privacy requirements.
- Reporting built for agencies and distributed teams - exportable reports designed for client billing, payroll, and workforce planning.

Insight enters a competitive time-tracking and employee-monitoring category increasingly shaped by the shift to remote and hybrid work. Hying positions Insight as a modern alternative for teams that have outgrown basic time trackers but want more transparency than traditional monitoring software typically offers. Insight is available now for organizations of all sizes, from small agencies to distributed enterprise teams. Request a demo & Claim your 50% discount today at [Insight by Hying](#).
