

Makify AI Launches AI Creative Platform Combining 30+ Image and Video Models

The Makify AI gives marketers, e-commerce sellers and content creators a single credit balance for image generation, photo editing and short-form video, with commercial licensing and watermark-free output on every paid plan. Free to start.

New York City, New York Aug 30, 2026 ([Issuewire.com](https://www.issuewire.com)) - Makify AI today launched at makifyai.com, an AI creative platform that brings twenty image and video generation models into a single workspace with one shared credit balance.

The platform addresses a problem that has grown alongside the AI tooling boom: creative teams now juggle separate subscriptions for image generation, video generation and photo editing, each with its own interface, billing cycle and licensing terms. Makify AI consolidates these into one account. A user can generate a product photo, refine it by describing the change in plain language, and animate it into a short promotional clip without switching tools or paying three vendors.

Thirteen image models are available at launch, including GPT Image 2, Nano Banana 2, Seedream 5.0 Pro, Qwen Image 3.0, Ideogram 4.0, Grok Imagine Image 2.0 and FLUX 3 Image. Seven video models cover text-to-video, image-to-video, frame-to-frame generation, reference-based video and motion control, among them Seedance 2.5, MiniMax H3, Wan 3.0 and FLUX 3 Video.

Alongside generation, Makify AI includes editing tools aimed at commercial production rather than experimentation: background removal and replacement, image upscaling, product photography staging, outfit generation, text editing inside existing images, old photo restoration, shadow removal and vector conversion. A prompt library and a Chrome extension support day-to-day workflows.

"Most small teams don't have a designer, a photographer and a video editor. They have one person and a deadline," said Makify AI Media Team of Makify AI. "We built Makify AI so that person can produce a full campaign's worth of visuals in an afternoon, with the commercial rights to actually use them."

Every paid plan carries a commercial license, watermark-free output, private generation visibility and parallel task processing. Annual pricing starts at \$9.90 per month for 1,800 credits, roughly 600 images, with Standard and Pro tiers at \$19.90 and \$39.90 per month for higher-volume work. Monthly billing and pay-as-you-go credits are available for occasional use, and new users can generate images free without entering payment details.

For developers, the Makify AI API supports batch generation and integration into existing product workflows, with documentation available at makifyai.com/docs.

Makify AI is available now at makifyai.com.

About Makify AI

Makify AI is an AI creative platform that helps designers, content creators, marketers, e-commerce sellers and small business owners generate, edit and transform images and video. The platform combines leading image and video generation models with a suite of editing tools under a single credit-based subscription, with commercial licensing included on all paid plans.
