1. Upload a video with multiple faces

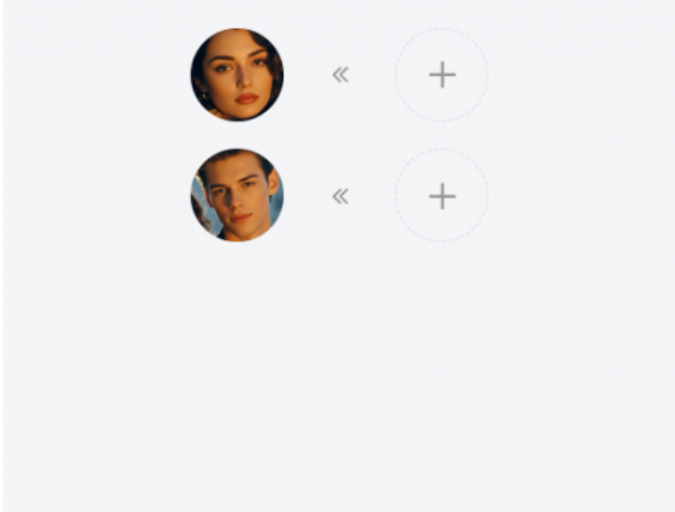

Pause on a frame with all the faces you want to swap, then click 'Detect Faces'.

Detect Faces

Try sample photos

2. Upload target photos to replace each face in the video

Swap Face Now

Hong Kong, Hong Kong S.A.R. Aug 16, 2026 ([Issuewire.com](https://www.issuewire.com)) - Mango AI, developed by Mango Animate, provides a [multiple face swap video](#) tool that allows users to replace several faces in a single video. Instead of replacing faces individually through conventional editing software, the online tool detects multiple people within a video and processes their replacements in one workflow. It can be used for group videos, social content, family videos, and other multi-person scenes.

Creating a multiple face swap video begins with uploading an original video containing several visible faces. Mango AI detects the faces appearing in the video and displays them separately. Users then upload a corresponding target photo for each detected person. Once the images have been assigned, the AI processes the video and replaces the original faces with the uploaded target photos while retaining the underlying movements and expressions.

The multiple face swap video tool supports videos up to 15 seconds long and up to 30 MB in size. Users can upload target face images in JPG, JPEG, PNG, or WebP format. Mango AI also provides sample videos for users who want to try the tool before uploading their own content. Once generation starts, the task continues processing in the background, even if the browser is closed.

The multiple face swap video tool creates videos with smooth face replacements that stay consistent with the original movements and expressions. Completed videos can be shared through a link or QR code, downloaded for distribution, shared directly to platforms such as Facebook and X, or embedded into websites and blogs. These options support both personal sharing and broader digital publishing needs.

Beyond the multiple face swap video feature, Mango AI also provides a [video face swap](#) creator for single-face replacement. With this tool, users upload a video and one target portrait, and the AI replaces the face in the video with the provided image. Whether a video features one person or multiple people, Mango AI provides face swap options for different video scenarios.

"The multiple face swap video tool is designed to make group face replacement easier to manage without requiring frame-by-frame editing," said Winston Zhang, CEO of Mango Animate. "By automatically detecting several faces and processing their replacements together, Mango AI gives creators a more direct way to experiment with multi-person video content while preserving the motion of the original video."
