

Mango AI's Face Swap Video Replaces Face From a Target Portrait Upload

Mango AI's face swap video tool replaces the face in a short single-person clip with a face taken from a separate portrait photo.

Hong Kong, Hong Kong S.A.R. Aug 10, 2026 ([Issuewire.com](https://www.issuewire.com)) - Mango AI has released a tool that replaces the face in a short single-person video with a face from a separate portrait photo. Users upload the source clip and the target image to generate the [face swap video](#).

The workflow uses two uploads. The original video carries the scene and the face to be replaced. The target photo supplies the new face. Once both files are ready, Swap Face Now starts generation. Users can test the process with sample videos before submitting their own material.

The source clip must show one clear, front-facing face under good lighting. Cartoon subjects, animal subjects, and multi-person clips fall outside the recommended inputs. Meeting those conditions helps the swap stay consistent from the first frame to the last. The target photo accepts JPG, JPEG, PNG, and WebP formats and must show a clear human face. Covered faces, group photos, and cartoon or animal images are unsuitable. Clearer portraits generally produce a more stable swap across the clip.

Mango AI said the tool is built for short edits where the scene already exists and only the on-screen face needs to change. Typical uses include entertainment clips, personalized greetings, campaign variants, and classroom examples. No desktop effects suite is required to complete the swap. Teams can reuse one performance take and change only the identity shown on screen.

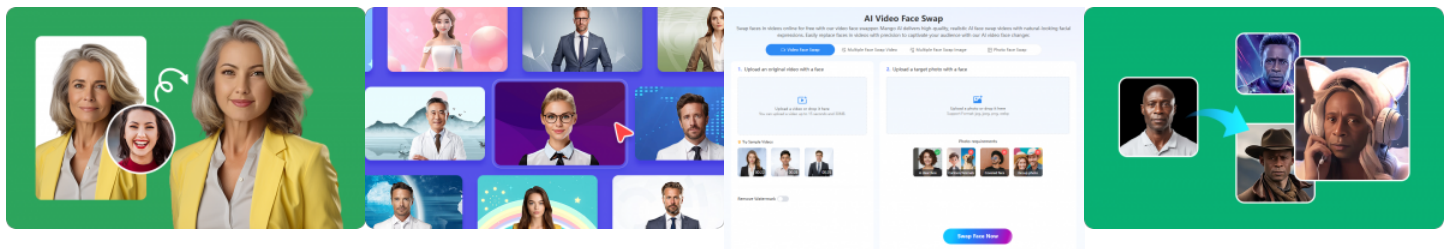

After generation, users can download the finished clip or share it through social and messaging channels. Optional watermark removal supports a clean master before distribution. For group footage, Mango AI offers a [multiple face swap video](#) tool. Photo Face Swap and Multiple Face Swap Image cover still-image edits within the same face-swap product set. All related tools remain accessible from the face swap video interface.

Winston Zhang, CEO of Mango Animate: "Face swap video is for people who already shot the scene and only need a new face on it. Upload the clip, upload the portrait, generate - and the original performance stays the base of the edit."
