

Medivex Launches HIPAA-Compliant AI Agents That Run the Healthcare Front & Back Office

Platform pairs ALIENTELLIGENCE's Quantum Kai intelligence with 300+ healthcare integrations, giving practices AI teammates that answer calls, verify insurance, and rebook no-shows — under a BAA, with every action audit-logged.

Medivex

Palo Alto, California Aug 13, 2026 ([Issuewire.com](https://www.issuewire.com)) - **Medivex** today launched a HIPAA-compliant automation platform that puts the healthcare front office on autopilot. Practices describe a job in plain English — chase the intake packet, verify coverage before the visit, work the no-show list — and Medivex builds and runs it across the EHR and the 300+ tools already in the building.

The platform is powered by **Quantum Kai**, the Quantum Agentic Intelligence developed by ALIENTELLIGENCE. Unlike tools that wire a language model to a trigger, Kai pursues goals: it plans, spins up specialized agents, runs them in parallel, and re-plans as the day changes. Medivex wraps that capability in a healthcare boundary — a Business Associate Agreement, scoped access, and a replayable audit trail on every action.

"Every practice I've walked into is losing money to work nobody wants to do," said **Bo Gregorix (Greg)**, co-founder of Medivex. "The call that rang out at lunch. The eligibility check done the morning of, when it's too late to fix anything. The no-show list somebody gets to on Friday. None of that is clinical work, and all of it costs you visits. We built Medivex to absorb it."

Bounded by design, not by policy

Medivex agents are scope-locked by construction. They reach only the connectors, actions, and fields a practice grants; connectors stay read-only until write access is explicitly enabled; escalation rules evaluate before any other instruction; and sensitive actions can require human sign-off. Every agent action is attributed, timestamped, and replayable.

The company draws a hard line at clinical work. Agents answer, book, confirm, and chase paperwork — they never diagnose, never assess urgency, and never clear a patient for a procedure.

"An agent with unbounded access to patient data isn't a teammate, it's a liability," said Greg. "Capability is not permission. Kai is extraordinarily capable, and inside Medivex it is deliberately fenced. The

practice decides what it can touch, and the log proves what it did."

Built for PHI, not adapted to it

Medivex runs on HIPAA-compliant, SOC 2 Type II infrastructure with AES-256 encryption at rest and TLS 1.2+ in transit. A standard BAA is included on every paid plan, self-serve, with no sales call — including the entry tier. Patient data is never used to train any model, and AI calls operate with zero data retention.

That positioning is deliberate. General-purpose automation tools, widely used in medical offices, typically will not sign a BAA — making patient data flowing through them a compliance exposure regardless of how well the tools are engineered.

"Compliance shouldn't be an enterprise feature you graduate into," Greg said. "A solo practitioner handles the same protected health information a hospital system does. They get the same BAA from us on day one."

Integrations, MCP, and vertical depth

Medivex connects to 300+ HIPAA-compliant systems across 30+ EHRs, plus scheduling, intake, labs, billing, payments, and communications — through official APIs only, with no screen scraping. Anything else with an API is reachable through a universal HTTP connector.

The platform also ships **Medivex MCP** (beta), a security layer that lets AI clients a team already uses — ChatGPT, Claude, Cursor — read and act on healthcare systems through allowlisted tools, without ever handling credentials.

At launch, Medivex offers tuned configurations for three verticals: mental health and behavioral practices, dental practices and DSOs, and med spas and aesthetic practices, each with the guardrails that setting requires.

Availability and pricing

Medivex is available today. Plans start at **\$298 per month** and are metered on workflow runs and AI credits, with unlimited users and no per-seat fees on any tier. Professional is \$798 per month, Scale Up is \$2,998 per month, and Enterprise pricing — which includes SSO, RBAC, advanced audit exports, a custom BAA, and the option to bring your own model alongside Kai — is available on request. Annual billing is discounted roughly 33 percent.

About Medivex

Medivex is a HIPAA-compliant automation and AI agent platform for healthcare front offices. Powered by ALIENTELLIGENCE's Quantum Kai, it connects the EHR and the 300+ tools around it, automating intake, scheduling, reminders, eligibility, rebooking, and follow-up — with a BAA on every paid plan and a full audit trail by default. Medivex is not an EHR and replaces nothing a practice already runs. Learn more at <https://alientelligence.com/medivex.html>
