

Miami AI News Publication MAIN Launches To Cover South Florida's Growing AI Economy

New Miami AI News (MAIN) climbs to #1 on Google for "AI News Miami" within two weeks of launch, with a focus on the AI infrastructure and data center buildout reshaping South Florida.

Miami, Florida Aug 20, 2026 ([Issuewire.com](https://www.issuewire.com)) - MAIN (Miami AI News), a new digital publication dedicated to covering artificial intelligence and its impact on South Florida, has officially launched at ainews.miami. In the two weeks since launch, MAIN has already climbed to the #1 position on Google for the search term "AI News Miami."

MAIN covers Miami's rapidly developing AI economy, including startups, investment, AI infrastructure and data centers, legal and regulatory developments, fintech, healthcare, education, real estate, security and jobs.

The publication aims to track not only the companies developing and adopting artificial intelligence in South Florida, but also the physical infrastructure being built to support the AI economy. Its coverage includes [AI data centers](#), computing infrastructure, power, real estate, investment and the wider economic impact of AI development. As demand for computing power increases, the development of data centers and related infrastructure creates implications for South Florida's power requirements, commercial real estate, construction, networking, investment and economic development.

"Miami's AI ecosystem has been growing faster than the coverage tracking it," said Kevin H. Wilde, founder of MAIN. "We built this to be the publication that executives, investors, and founders actually check - not another generic tech blog, but something with the tone and rigor of the outlets they already read for business news."

MAIN combines coverage of Miami-based AI companies and developments with analysis of major AI stories from around the world, examining what those developments mean for Miami and South Florida.

Editorial Independence

MAIN is independently edited and published by Kevin H. Wilde, who also founded AEOGeoAI, an AI search visibility research and consulting practice. The research is registered with a [DOI through Zenodo](#).

MAIN operates independently from AEOGeoAI's commercial activities and receives no preferential editorial coverage.

MAIN is also developing a directory of Miami AI companies, [Miami AI 50](#), as part of its broader effort to map South Florida's artificial intelligence ecosystem.

Readers can access MAIN's coverage, categories and developing company directory at <https://ainews.miami>.
