

Smile Arizona Dentistry Marks More Than 30 Years of Providing Family Dental Care in Scottsdale

The Scottsdale dental practice continues to provide preventive and restorative care for children, teenagers, adults and seniors.

Scottsdale, Arizona Aug 28, 2026 ([Issuewire.com](http://www.Issuewire.com)) - Smile Arizona Dentistry is recognizing more than 30 years of providing family dental care to patients in Scottsdale and nearby communities, including Tempe, Mesa, and Phoenix.

The practice has served the region since 1993 and provides dental care for patients at different stages of life, from young children to older adults. Its family dentistry services are intended to help households receive preventive, restorative and ongoing oral care through one dental office.

Family dentistry addresses oral health needs that can change throughout a person's life. Children may require first dental visits, cleanings, fluoride treatments, sealants, dental X-rays and monitoring of tooth development. Teenagers may need preventive care and evaluations involving their teeth and bite, while adults and seniors may require care for gum health, tooth damage, missing teeth and previous dental

restorations.

Smile Arizona Dentistry provides dental examinations, professional cleanings, tooth-colored fillings, dental sealants, tooth extractions, crowns and bridges, dentures, periodontal treatment and restorative dentistry. The practice also offers clear aligner treatment, conscious sedation and emergency dental care based on individual patient needs.

“Dental needs can change considerably from childhood through adulthood,” said Dr. Beth Vander Schaaf of Smile Arizona Dentistry. “Providing care for patients of different ages allows the dental team to understand their oral health history and recommend care that reflects their current needs.”

Supporting Preventive Care at Different Life Stages

Preventive dental care is an important part of family dentistry. Regular examinations allow dental professionals to monitor teeth and gums and identify concerns that may require additional attention.

For young patients, Smile Arizona Dentistry provides pediatric-friendly services such as first dental visits, examinations, professional cleanings, fluoride treatments, sealants, dental X-rays and early orthodontic assessments. These appointments can also help children become familiar with the dental environment and develop consistent oral hygiene habits.

The dental team provides patients and families with information about brushing, flossing, diet, toothpaste selection and routine oral care. Patient education is included as part of appointments to help families understand how daily habits may affect their teeth and gums.

Dental Care for Adults and Seniors

As patients grow older, their dental care needs may involve previous restorations, tooth wear, periodontal health, missing teeth, or changes associated with medications and underlying health conditions.

Smile Arizona Dentistry evaluates each patient individually before recommending treatment. Depending on the findings, care may include fillings, periodontal treatment, crowns, bridges, dentures, root canal treatment or tooth replacement options.

Dr. Beth Vander Schaaf provides general, cosmetic, emergency, and implant dentistry. The practice also collaborates with Dr. Brent Call for sedation services and Dr. Roy Howard for root canal treatment.

Appointment Options for Scottsdale Families

Smile Arizona Dentistry offers same-day and next-day appointments for new and existing patients when scheduling permits. Walk-in patients may also be accommodated depending on availability and the nature of the dental concern.

Families may contact the office to request appointments for more than one household member. Availability depends on the type and length of the services required.

The practice is located at 7327 E. Thomas Road in Scottsdale. Office hours are Monday through Thursday from 8:00 a.m. to 5:00 p.m. and Friday from 8:00 a.m. to 3:00 p.m.
