

Tendata Launches Tendata iTrader V6.0, Introducing an AI-Driven World Trade Data Platform for Smarter Business Growth

Tendata AI: Cover All Trade Scenarios

Shanghai, China Aug 17, 2026 (Issuewire.com) - a leading provider of world trade data and AI-powered business intelligence solutions, today announced the launch of Tendata iTrader V6.0, the next-generation AI-driven global trade intelligence platform designed to help businesses identify market opportunities, acquire high-value customers, and make faster, data-driven decisions.

Built upon Tendata's extensive global trade database and powered by proprietary AI technologies, Tendata represents a major evolution from traditional trade data search tools to an intelligent decision-making platform. By combining Tendata AI with world trade data, business intelligence, and internet data, Tendata delivers actionable insights across every stage of international business development—from market research and customer discovery to competitive analysis and customer management.

AI-Driven Intelligence for the Entire International Trade Workflow

Unlike conventional world trade data platforms that simply provide trade records, Tendata integrates Tendata AI deeply into every business scenario. Its proprietary international trade AI model works alongside industry knowledge to transform massive datasets into practical business recommendations.

The world trade data platform provides two intelligent working modes:

- Dialogue Mode, allowing users to ask natural-language questions about markets, customers, competitors, or products and receive instant AI-generated analysis.

- Expert Mode, which combines AI capabilities with industry expertise to generate comprehensive market research reports and strategic recommendations.

This dual-mode approach enables businesses to move beyond raw data and quickly obtain decision-ready intelligence tailored to their specific industries and business goals.

Massive Global Data Coverage Supporting Better Decisions

Tendata world trade data platform is powered by one of the industry's most comprehensive global trade intelligence databases, including:

- More than 10 billion global trade transaction records covering 228 countries and regions
- Extensive multidimensional datasets covering products, intellectual property, business relationships, news, exhibitions, and social media information

By integrating world trade data, business data, and internet data into one unified platform, users gain a complete understanding of markets and customers without switching between multiple research tools.

AI-Powered Product Matrix for End-to-End Customer Development

Tendata world trade data platform brings together multiple intelligent modules that work seamlessly throughout the customer acquisition journey.

- **Info: Global Trade Data Analysis**

T-Info enables businesses to analyze global import and export activities using over 10 billion real trade records. Users can identify high-potential markets, monitor product trends, analyze buyer behavior, and generate comprehensive trade reports for strategic planning.

T-Discovery: Tendata AI Customer Discovery and Company Intelligence

T-Discovery helps businesses locate overseas buyers that have conducted recent trade transactions. Through one-click Tendata AI background checks, users can instantly access company profiles, trade history, business relationships, financial information, legal risks, intellectual property, exhibition activities, and AI-generated business recommendations.

The platform also generates personalized outreach content and provides verified contact information across email, LinkedIn, Facebook, and other communication channels, significantly improving customer acquisition efficiency.

- **Insight: Intelligent Market and Customer Monitoring**

T-Insight continuously monitors global markets, customers, competitors, and products through four intelligent insight modules:

- Market Insight
- Customer Insight
- Competitive Insight
- Product Insight

Businesses receive real-time alerts when customer purchasing behavior changes, competitors gain new buyers, product prices fluctuate, or market dynamics shift, allowing sales teams to respond proactively and capture new opportunities before competitors do.

Cleaner Data, Smarter Search, Better Insights

To improve data usability, Tendata introduces several intelligent enhancements that simplify complex trade research.

AI-Enhanced Search

Users can perform flexible searches across products, HS codes, company names, countries, and multiple customized conditions. Tendata AI recommendation capabilities further improve search accuracy by expanding matching dimensions and helping users discover highly relevant opportunities.

Intelligent Data Governance

Tendata world trade data platform standardizes company names, country names, and quantity units across global datasets, eliminating duplicate records and improving analytical accuracy. An industry-exclusive quantity unit conversion feature allows businesses to compare trade volumes and pricing more effectively across different markets.

About Tendata

Founded in 2005 and headquartered in Shanghai, Tendata is a global provider of AI-powered trade intelligence and world trade data solutions. With more than 20 years of experience, Tendata combines trade data, business intelligence, internet data, and proprietary AI technologies to help enterprises identify global opportunities, acquire high-value customers, and achieve sustainable international growth.

Today, Tendata serves more than 100,000 business partners worldwide and continues to drive digital transformation across global trade through continuous innovation in Tendata AI and data intelligence.
