

ZoikoMeds Launches Global Medicine Availability Infrastructure as Pharmacy Onboarding Begins in India

Sacramento, California Aug 25, 2026 ([IssueWire.com](https://www.issuewire.com)) - ZoikoMeds, a Zoiko Healthcare platform, today announced its market launch and move into commercial scale-up. The tested platform has begun onboarding pharmacies in Telangana, India.

ZoikoMeds is designed as an independent medicine availability layer, connecting people looking for medicines with participating pharmacies while giving pharmacies availability infrastructure.

Based on its market review, ZoikoMeds believes it is the world's first independent, globally scoped medicine availability search platform. It is not owned or operated by a pharmacy chain, wholesaler, or pharmacy benefit manager and is designed for multi-market deployment.

"Access to medicine should not depend on how many pharmacies someone has the time or ability to contact," said Lennox McLeod, Founder and Executive Chairman of Zoiko Group. "ZoikoMeds was built around a straightforward objective: make it easier for people to find where medicines may be available, while giving pharmacies infrastructure to connect with that demand."

Availability Without Visibility

Medicine availability remains fragmented across pharmacies, systems, and geographies. Even when a medicine is available nearby, people may not know where to look. ZoikoMeds brings medicine lookup, location intelligence, pharmacy discovery, and availability confidence into one privacy-led experience. Consumer search is free and does not require an account.

Built Around Pharmacies

Pharmacies are central to the model. ZoikoMeds complements, rather than replaces, the pharmacist relationship. Participating pharmacies gain an additional discovery channel for people actively searching

for medicines, without public exposure of exact stock quantities. Availability remains confidence-based and should be confirmed directly with the pharmacy.

Technology and Scale

Technology engineered by Zoiko Tech, the platform is built around **ZoikoAvail™**, its availability confidence engine; **ZoikoSignal™**, its shortage intelligence engine; and **MediBase™**, its medicine identity normalization foundation. Together, these systems support consumer search, pharmacy workflows, availability intelligence, and future authorized institutional integrations.

ZoikoMeds is global by design and local by activation. Each market will be activated in accordance with applicable pharmacy, medicine, privacy, security, and healthcare requirements. India is the first market in the current pharmacy-onboarding phase.

“Our focus now is execution — onboarding pharmacies, expanding useful coverage, and building dependable medicine availability infrastructure at meaningful scale,” McLeod said.

Important Information

ZoikoMeds does not prescribe, dispense, sell, deliver, or recommend medicines and does not provide medical advice. Availability information is not a guarantee of stock. Users should confirm current availability with the pharmacy and consult an appropriately qualified healthcare professional regarding medicines and treatment.

Pharmacy Participation

Pharmacy onboarding is underway in Telangana. Pharmacies interested in joining the ZoikoMeds network can contact pharmacies@zoikomeds.com or visit ZoikoMeds.com. Consumers can visit ZoikoMeds.com to search availability in supported areas.

About ZoikoMeds

ZoikoMeds is a Global Medicine Availability Infrastructure, operated by Zoiko Healthcare Inc. Technology is engineered by Zoiko Tech. Both companies are part of Zoiko Group.
