

10 Halloween DIY Projects to Make with a UV Printer

Discover 10 creative Halloween DIY Projects you can make with a Desktop UV Printer, from personalized tumblers and phone cases to acrylic signs and photo gifts. Explore fun UV printer projects with LONGER ePrint and create unique Halloween gifts.

Hong Kong, Hong Kong S.A.R. Sep 18, 2026 ([IssueWire.com](https://www.issuewire.com)) - Halloween is the perfect time to turn ordinary items into creative, personalized decorations and gifts. With a **Desktop UV Printer**, you can print colorful graphics, spooky patterns, names, photos, and layered effects directly onto a variety of compatible surfaces.

The [**LONGER ePrint UV Printer**](#) is designed for this type of creative customization. With its dual-head printing system and support for UV, DTF, DTG, and UV DTF applications, ePrint gives makers more flexibility when creating seasonal products and personalized gifts.

From custom tumblers and phone cases to acrylic signs and photo gifts, here are **10 Halloween DIY projects** you can make with a UV printer.

1. Personalized Halloween Tumblers

Tumblers are practical Halloween gifts that can be customized for friends, family, or customers. With a **Desktop UV Printer** such as the LONGER ePrint, you can create designs featuring pumpkins, ghosts, bats, skeletons, or personalized names on compatible tumbler surfaces.

For a more unique design, combine Halloween graphics with the recipient's name or a short message such as "Spooky Season" or "Trick or Treat."

If you're producing multiple designs, UV printing also makes it easier to create different versions without changing the entire production process.

2. Custom Halloween Phone Cases

Turn a plain phone case into a personalized Halloween accessory. Create designs featuring haunted houses, witches, skulls, spiders, pumpkins, or cute Halloween characters.

You can also add a name, initials, or even a photo to make each case unique. This makes custom phone cases a practical choice for personalized Halloween gifts, especially for teenagers and young adults.

The ePrint UV Printer can help makers produce detailed, colorful graphics directly on compatible phone cases, making it suitable for both one-off creations and small batches.

3. Halloween Acrylic Door Signs

Create a personalized Halloween welcome sign for a front door, porch, or party entrance.

Transparent and colored acrylic can provide an attractive base for spooky illustrations and bold Halloween typography. Try messages such as "Enter If You Dare," "Happy Halloween," or a personalized family name.

With a UV printer, you can combine multiple graphic elements and colors to create more visually striking signs. When supported by the printer, white ink can also help designs stand out on transparent or darker surfaces.

4. Personalized Halloween Keychains

Small acrylic, wood, and other compatible blanks can be transformed into custom Halloween keychains.

Print names, initials, pumpkins, ghosts, bats, or miniature Halloween characters onto the surface. You can create individual designs for each person or produce a matching set for a Halloween party.

Because keychains are small and relatively simple to customize, they are also a useful option for makers and small businesses looking to create affordable seasonal products with a Desktop UV Printer.

5. Custom Halloween Coasters

Give your Halloween party table a creative upgrade with personalized coasters.

Create a different design for each coaster, such as a vampire, witch, skeleton, pumpkin, or haunted house. You can also add a family name, party date, or themed message.

The LONGER ePrint UV Printer can be used to create detailed graphics on compatible coaster blanks, allowing makers to turn a simple functional item into a personalized Halloween decoration.

6. Halloween Ornaments and Hanging Decorations

Halloween decorations can be more than disposable seasonal items. Create reusable ornaments for walls, windows, shelves, doors, or Halloween parties.

Print colorful designs on compatible acrylic, wood, or other flat blanks. Add names, dates, or short messages to turn simple decorations into personalized keepsakes.

For example, a family could create a set of Halloween ornaments featuring each family member's name and a different spooky character.

7. Custom Halloween Candle or Jar Decorations

Give plain candle containers, jars, and compatible decorative surfaces a Halloween makeover with UV printing.

Spooky illustrations, Halloween typography, and personalized messages can instantly create a seasonal look. You could create a collection around themes such as "Witch's Brew," "Monster Juice," or "Potion No. 13."

When working with candles or containers, make sure the selected blank and surface are suitable for UV printing and appropriate for the intended use.

8. Personalized Halloween Party Decorations

Planning a Halloween party? A Desktop UV Printer can help you create customized table signs, name plates, food labels, drink markers, and other decorations.

The LONGER ePrint UV Printer is particularly useful when a party requires multiple personalized pieces. Instead of using the same decoration for everyone, you can customize each guest's name, table number, or message.

Matching designs across signs, coasters, drink markers, and other decorations can also give the party a more consistent visual theme.

9. Custom Halloween Photo Gifts

Photos can turn a simple Halloween project into a memorable keepsake.

Print a favorite family photo, pet photo, or Halloween portrait onto a compatible acrylic, wood, coated metal, or other printable surface. Add pumpkins, bats, ghosts, or other Halloween graphics around the image to create a seasonal design.

The ePrint UV Printer can be used for detailed photo and graphic printing on compatible materials, making photo-based UV printer projects an interesting option for families, couples, and pet lovers.

10. Personalized Halloween Gift Boxes and Packaging

Don't overlook the packaging. A plain gift box, acrylic box, or compatible packaging surface can be customized with Halloween graphics, names, logos, or short messages.

For makers and small businesses, personalized packaging can help create a stronger seasonal brand identity. A custom-printed box can make an ordinary Halloween gift feel more premium before the recipient even opens it.

For example, a small business could use the ePrint UV Printer to create branded Halloween packaging for custom candles, handmade accessories, or seasonal gift sets.

Why Use a Desktop UV Printer for Halloween DIY Projects?

A **Desktop UV Printer** makes it possible to create highly customized Halloween products without relying solely on stickers or traditional printing methods.

The LONGER ePrint UV Printer combines a dual-head printing system with multiple UV printing capabilities, giving makers flexibility when working on different creative applications. Depending on the printer configuration and compatible materials, makers can produce detailed graphics, text, photos, and layered effects.

The biggest advantage for Halloween projects is customization. A single design can be adapted for different names, colors, characters, photos, and occasions.

This makes ePrint useful not only for individual DIY creations but also for makers who want to test seasonal products, produce small batches, or create personalized Halloween gifts for customers.

Tips for Successful Halloween UV Printer Projects

Before starting any [UV printer project](#), make sure the blank is compatible with your printer and properly prepared for printing.

Flat surfaces are generally easier to work with. Curved products may require a suitable rotary attachment or other specialized setup, depending on the printer and product.

For better results:

Prepare artwork at a suitable resolution.

Test the design on a sample before printing the final product.

Check ink adhesion on the selected material.

Use white ink when appropriate for transparent or dark surfaces.

Follow the printer manufacturer's recommendations for compatible materials.

Make sure the finished product is suitable for its intended use.

Turn Halloween Ideas into Personalized Gifts

The best **Halloween DIY projects** combine creativity with personalization. A simple tumbler, phone case, coaster, keychain, acrylic sign, or photo gift can become much more memorable when you add someone's name, favorite character, photo, or a design created specifically for them.

With a **Desktop UV Printer like the LONGER ePrint**, makers can turn these ideas into practical **UV printer projects** for Halloween parties, family gifts, seasonal decorations, and small-business products.

Instead of making the same Halloween decoration for everyone, you can create something specifically for the person receiving it. That's what makes personalized Halloween gifts more meaningful—and what makes UV printing a useful tool for turning Halloween creativity into finished products.

FAQ: Halloween DIY Projects with a UV Printer, What can I make with a UV printer for Halloween?

Popular Halloween UV printer projects include personalized bags, tumblers, phone cases, acrylic signs, keychains, coasters, ornaments, party decorations, photo gifts, and customized packaging.

Is a Desktop UV Printer suitable for DIY Halloween projects?

Yes. A Desktop UV Printer is well suited to small-batch and personalized projects because designs can be customized without requiring large production quantities. The LONGER ePrint UV Printer can be used for a variety of compatible UV printing applications.

What makes a good personalized Halloween gift?

Useful products such as bags, tumblers, phone cases, keychains, coasters, acrylic signs, and photo gifts are good choices because they can be customized with names, photos, Halloween graphics, or personal messages.

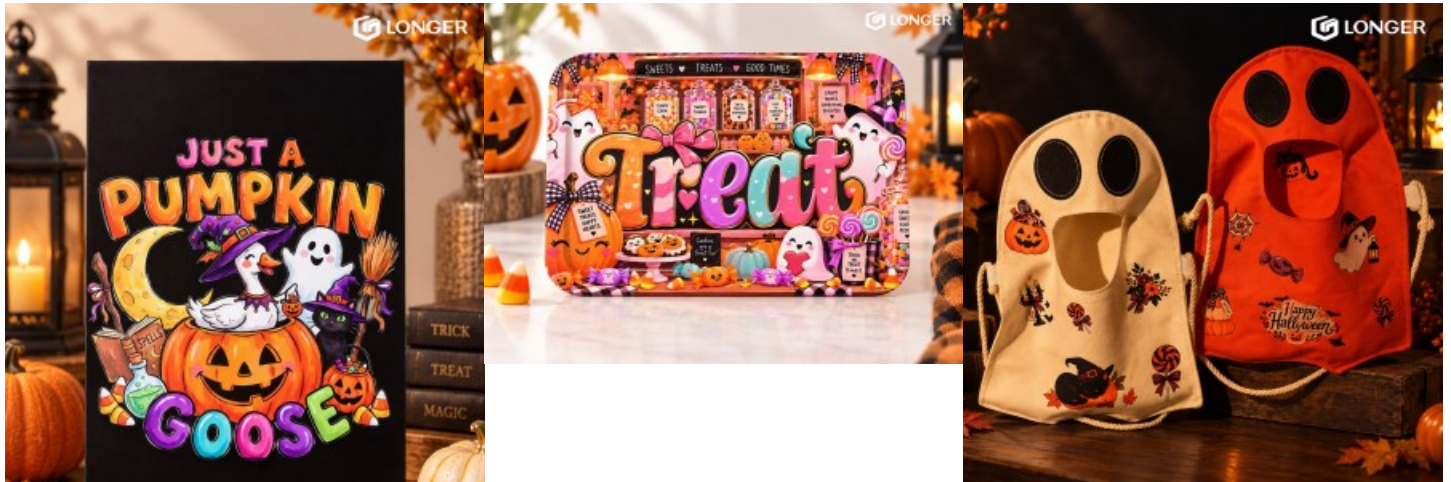

Can UV printing be used on different materials?

UV printers can work with many compatible materials and coated blanks, but printability depends on the specific printer, ink, surface, and application. Always check the manufacturer's material recommendations before printing.

Why use ePrint for Halloween UV printer projects?

LONGER ePrint combines a [Desktop UV Printer](#) format with a dual-head printing system and multiple UV printing applications. This gives makers flexibility to experiment with personalized Halloween

products, decorations, gifts, and small-batch seasonal products.
