

Aaron Marjala Expands His Work in the Property Inspection Industry

Aaron Marjala is a Wisconsin business owner specializing in property inspections, mold and radon testing, environmental assessments, and consulting through Tri County Inspection & Environmental and MoldSafe.

Madison, Wisconsin Sep 7, 2026 ([Issuewire.com](https://www.Issuewire.com)) - Aaron Marjala is a Wisconsin-based business owner who owns and operates Tri County Inspection & Environmental and MoldSafe. His work includes residential and commercial property inspections, mold and radon testing, environmental assessments,

and related building services.

Aaron Marjala has also developed experience as an expert witness and consultant, working on matters involving Wisconsin home inspection standards, construction defects, contractor fraud, and home inspector negligence. His career began in the fire service, where he later became a Fire Captain, before an injury led him to move into property inspection, business, education, environmental services, and professional consulting.

[Aaron Marjala](#) is expanding his work in the property inspection industry, building on years of experience in property evaluation, environmental testing, and building-related services throughout Wisconsin. Through Tri County Inspection & Environmental and MoldSafe, he continues to provide services that help property owners, buyers, sellers, and other professionals gain a better understanding of building conditions.

Property inspections can be an important part of making informed decisions about a home or commercial building. Some problems may not be easy to notice during a basic visual review. Issues involving moisture, building components, ventilation, structural elements, or other areas of a property can become more difficult and costly when they are not identified early. The work of [Aaron Marjala](#) focuses on providing clients with useful information about these conditions through professional inspection and testing services.

Mold and radon testing are also important parts of this work. These services address environmental concerns that may not always be visible during a standard inspection. Mold can develop in areas affected by moisture, while radon is a naturally occurring gas that can enter buildings from the ground. Testing can provide property owners with information about these concerns and help them determine whether additional steps may be needed.

Environmental assessments add another area of service. These assessments can help property owners better understand conditions that may affect a building or its surroundings. The information gathered through inspections and testing can be useful when owners are planning maintenance, addressing concerns, considering a property purchase, or evaluating an existing building.

Aaron Marjala's professional background also brings practical experience to his current work. His early career in the fire service involved responsibilities where careful observation, preparation, safety, and decision-making were important. After becoming a Fire Captain, an injury ended his active firefighting career. He then began building a new professional path in property inspection and related fields.

That transition allowed Aaron Marjala to bring experience from public service into the property inspection industry. His work now combines property inspections, environmental testing, business operations, education, and consulting. This broad professional background has helped shape an approach focused on careful observation and clear communication.

In addition to inspection and testing services, Aaron Marjala serves as an expert witness and consultant in property and construction-related matters. His consulting work includes cases involving Wisconsin home inspection standards, construction defects, contractor fraud, and home inspector negligence. This work requires a detailed understanding of inspection practices and the ability to review property-related issues carefully.

The combination of inspection, environmental testing, consulting, and expert witness work gives him experience across several areas of the property industry. These services can be useful for people who

need more information about a building, its condition, or concerns that may require further review.

Tri County Inspection & Environmental and MoldSafe remain central to this work in Wisconsin. Through these businesses, services related to property inspection and environmental testing are provided to residential and commercial clients. The focus is on giving clients practical information that can help them better understand their properties.

The property inspection industry plays an important role in real estate and building decisions. Buyers want to know more about a property before making a purchase. Sellers may want to understand potential concerns before placing a property on the market. Property owners also need reliable information when planning maintenance or improvements. Commercial property owners may use inspections and assessments when evaluating buildings and planning future work.

As Aaron Marjala continues to expand his work, his professional approach remains connected to practical property knowledge and direct field experience. His background in the fire service, property inspection, environmental testing, and consulting provides a broad perspective on building conditions and related concerns.

Clear communication is another important part of his work. Inspection findings can sometimes involve technical terms or building issues that may be difficult for property owners to understand. Explaining information in simple and useful language can help clients understand what was observed and why certain concerns may deserve further attention.

The continued work of Aaron Marjala reflects a focus on helping people make better-informed property decisions. Whether the need involves a residential inspection, commercial inspection, mold testing, radon testing, environmental assessment, or professional consultation, the goal is to provide information that can help clients understand their properties more clearly.

His professional journey also demonstrates a move from public service into a specialized business field. Beginning in the fire service and later serving as a Fire Captain, he developed experience in situations that required responsibility, awareness, and careful judgment. Following his injury, he applied those qualities to a new career involving property inspection, environmental services, education, business, and consulting.

Today, Aaron Marjala continues to build on that experience through his work with Tri County Inspection & Environmental and MoldSafe. His services support residential and commercial property needs while also extending into environmental testing and professional consulting.

As his role in the property inspection industry develops, his work remains focused on practical information, careful evaluation, and professional service. Through years of experience across multiple fields, he continues to support property owners and industry professionals who need a clearer understanding of building conditions and related concerns.
