

AISEOgic Launches Free AI SEO Audit Tool for Google and AI Search

AISEOgic introduces a free website audit platform that combines SEO, AI SEO, GEO, AEO and LLMO analysis with actionable recommendations for improving search and AI visibility.

Rajkot, Gujarat Sep 23, 2026 ([IssueWire.com](https://www.issuewire.com)) - AISEOgic Launches Free AI SEO Audit Tool for Google and AI Search

AISEOgic has introduced a free AI-powered website audit platform designed to help website owners, marketers, SEO professionals, agencies, freelancers, and businesses understand their website performance across traditional search and emerging AI-powered search experiences.

Available at <https://aiseogic.com/>, AISEOgic brings multiple website analysis areas together in a single audit, including technical SEO, website speed, security, accessibility, AI SEO, Generative Engine Optimization (GEO), Answer Engine Optimization (AEO), and Large Language Model Optimization (LLMO).

The platform is designed around a simple process: users enter their website URL, receive an audit report, and can review recommendations to identify areas that may require attention.

AISEOgic analyzes traditional SEO factors such as on-page optimization, technical SEO, metadata,

structured data, internal links, crawlability, indexing-related signals, redirects, website performance, and Core Web Vitals. It also examines factors related to AI search readiness and content discoverability.

As search experiences continue to expand beyond traditional search results, AISEOgic also focuses on how websites can prepare their content and structure for AI-powered discovery. The platform provides analysis related to GEO, AEO, and LLMO, helping users understand areas such as answer-focused content, AI search readiness, content structure, and signals that can help AI systems interpret website information.

AISEOgic supports analysis relevant to modern search experiences including Google Search, Google AI Overviews, Google AI Mode, ChatGPT, Gemini, Claude, and Perplexity. The platform does not promise guaranteed rankings, citations, or mentions in any particular search engine or AI system. Instead, it provides website analysis and recommendations that users can use as part of their own SEO and content improvement process.

The audit report is designed to go beyond a single website score. AISEOgic provides separate areas of analysis so users can identify specific opportunities and prioritize technical and content improvements.

In addition to its main audit platform, AISEOgic provides a collection of SEO-focused tools for website owners and marketing professionals. These include tools for checking schema markup, FAQ structured data, canonical URLs, XML sitemaps, broken links, meta tags, and other website optimization factors.

AISEOgic also provides educational resources covering AI SEO, GEO, AEO, LLMO, AI search visibility, Google AI Overviews, ChatGPT, Gemini, Claude, Perplexity, and AI search optimization. These resources are intended to help website owners understand the changing search environment and the relationship between traditional SEO and AI-powered search.

Users can access the free audit platform at <https://app.aiseogic.com/>. No credit card is required to start an audit.

"AISEOgic was built to make SEO and AI search optimization clearer and more practical," said Nirav Virani, founder of AISEOgic. "Website owners often need to understand many different technical and content factors at the same time. Our goal is to bring these areas together in one audit and make the findings easier to understand and act on."

AISEOgic is designed to complement existing SEO workflows rather than replace specialist SEO platforms. Website owners can use the platform for their own websites, while SEO professionals, agencies, freelancers, and marketing teams can use the audit reports to identify technical issues and optimization opportunities.

As search continues to evolve from traditional keyword-based results toward a combination of search engines, answer engines, and generative AI experiences, AISEOgic aims to provide website owners with a practical starting point for evaluating their current search readiness.

Previous AISEOgic Announcements
