

Beyond Intranet Enhances Power BI Consulting Services to Support AI-Driven Business Intelligence

Chicago, Illinois Sep 10, 2026 ([Issuewire.com](https://www.issuewire.com)) - Beyond Intranet, Microsoft Solutions Partner has announced its [Power BI consulting services](#) to help organizations use AI for everyday reporting and analytics. This comes when most companies are not short of data, they are short of ways to actually use it fast enough to matter.

Power BI has been the go-to dashboard and reporting tool for years now. But dashboards that tell us what happened are not enough anymore. The teams want to know what's next, and they want the system to tell them in plain language, not dig through filters and pivot tables. That's the gap Beyond Intranet is now building its consulting services around.

Beyond Intranet Helps Businesses Move From Reporting to Real Foresight

The idea behind the expanded offering is simple: stop treating BI as a rearview mirror. Beyond Intranet's consultants work with clients to build Power BI environments that not only visualize past performance but actually flag what's likely to happen next: a dip in demand, a supply chain risk, a customer about to churn.

Beyond Intranet integrates standard ML models, natural language query capabilities, and automated anomaly detection into the client's existing Power BI installation. A lot of this is connected to Microsoft Fabric and Azure AI services, so companies are not ripping out what they have, they are extending it. Beyond Intranet also invests time in training internal teams so that the AI-enhanced dashboards aren't a black box only the consultants understand.

Beyond Intranet Builds Its Services to Grow With the Client

Not all companies are ready to go all-in on AI-powered BI from day one, and Beyond Intranet's engagement model reflects that. They can start with the basics, better reporting, better data governance and add more sophisticated AI capabilities as their teams become comfortable and their data maturity increases.

This step-by-step process has been adopted by industries as diverse as finance, healthcare, retail and manufacturing, where an insight that arrives too late can be as damaging as one that is wrong.

Milin Dholakia, Chief Operating Office, put it this way: "We've always believed data should do more than sit in a dashboard. With AI now built into the Power BI ecosystem, there's a real opportunity to help clients spot problems early instead of only reacting to them later. That's what this expansion is really about, making sure our clients act on their data, not just look at it."

Beyond Intranet plans to build on this foundation moving forward, with generative AI integrations and industry-specific templates on the roadmap.

About Beyond Intranet

[Beyond Intranet](#) is a Microsoft Solutions Partner and an IT consulting firm working with enterprises on digital workplace solutions and business intelligence. The team helps organizations turn scattered

systems and data into something they can actually use to run the business better. Beyond Intranet has expanded its Power BI consulting services to bring AI-driven, forward-looking analytics into everyday business reporting.
