

China Best Armoured Floating Hose Exporter: Setting the Global Standard for Quality

Danyang, Jiangsu Sep 16, 2026 ([Issuewire.com](https://www.issuewire.com)) - In the dynamic and demanding sectors of offshore oil and gas, and heavy-duty dredging, the reliability of critical equipment is paramount. Failure of a single component can lead to significant environmental, financial, and logistical setbacks. Within this specialized landscape, one Chinese manufacturer, [Jiangsu CDSR Technology Co., Ltd. \(CDSR\)](#), is consistently establishing itself as the China Best Armoured Floating Hose Exporter, challenging established global norms and setting a new benchmark for quality and durability.

CDSR, a technology-oriented enterprise with a legacy spanning over 50 years (originating from Danyang Ship Rubber Factory in 1971), has successfully integrated decades of experience with continuous R&D, positioning it as a leading force in the fluid transfer industry. The company's focus is on serving the global petroleum industry and the dredging industry, two fields where operational conditions push materials and engineering to their absolute limits.

Key Pillars of CDSR's Global Competitiveness

CDSR's strong position as an exporter is built upon a foundation of technical excellence, robust certification, and an unwavering focus on durability in extreme environments.

Offshore Expertise and Certification: The GMPHOM Standard

A core advantage for CDSR is its extensive experience in the highly regulated marine and offshore oil

sector. The company is recognized as the leading manufacturer of marine hoses (GMPHOM 2009) and dredging hoses in China.

GMPHOM 2009 Compliance: The Guide to Manufacturing, Purchasing, Handling and Operational of Marine Hoses (GMPHOM) is a stringent international standard for offshore oil and gas transfer. Adhering to this specification demonstrates an unparalleled level of engineering, quality control, and manufacturing rigor. Successfully navigating this demanding qualification process provides CDSR's hose products with an inherent, superior level of robustness, ensuring they can withstand intense operational stresses, including high pressure and suction forces.

Proven Track Record: Supplying its first marine hose string in 2008 and its own-brand string to CNOOC in 2016, leading to recognition such as "The Best Contractor of HYSY162 Platform," underscores the company's ability to meet the critical requirements of major global energy players.

Specialized Dredging Solutions: The Armoured Advantage

In the dredging market, the company's product portfolio is engineered to address the most challenging environments. Dredging operations often involve conveying highly abrasive materials, such as coral reefs, weathered rocks, and sharp ores, which rapidly erode standard rubber hoses. This is where the core competitive advantage of the Armoured Floating Hose emerges.

Armoured Hoses for Extreme Abrasion: CDSR's Armoured Floating Hose line is specifically designed with built-in wear-resistant steel rings. This crucial feature provides exceptional wear resistance and high impact resistance, significantly extending the service life of the hose in conditions where ordinary dredging hoses would quickly fail.

Technical Excellence: These hoses, which include an armoured suction and discharge configuration, are composed of a specialized lining, the crucial wear-resistant steel rings, reinforcing plies, and a robust outer cover. They offer good flexibility and bending performance, alongside a wide range of pressure ratings to withstand both positive and negative pressure, a necessary capability in demanding dredging operations.

Products and Applications Across Core Industries

CDSR's dual-focus product offering caters to two essential global markets:

- **Dredging Industry Products**

The dredging market is experiencing consistent growth, driven by key global trends such as port enlargement and maintenance, coastal protection against climate change, and infrastructure development. The industry requires hoses that can pump materials over longer distances and maintain high production rates, aligning perfectly with CDSR's strengths.

Floating and Sub-sea Hoses: This includes Full Floating Hoses (with an integrated, low-water-absorption, closed-cell foaming flotation jacket for stable buoyancy), Tapered Floating Hoses, and Floating Steel Pipes.

Discharge and Suction Hoses: Products such as Discharge Hoses with Steel Nipples and Suction Hoses are designed for efficient and reliable material transfer.

Ancillary Equipment: [CDSR](#) also supplies critical ancillary components, including Expansion Joints (rubber compensators) designed to relieve mechanical stress in the pipeline system, and pipe floats.

• Oil & Marine Industry Products

Serving the offshore oil sector requires adherence to the highest safety and environmental standards. CDSR's marine hoses are central to oil transfer operations worldwide.

Floating Oil Hoses: Available in single or double carcass configurations, these hoses are essential for offloading and loading petroleum products at sea.

Submarine Oil Hoses: Used in sub-sea installations and Catenary Anchor Leg Mooring (CALM) buoy systems, these products are built for long-term endurance beneath the waves.

Safety and Environmental Focus: The company operates under management systems conforming to QHSE standards (Quality, Health, Safety, and Environment), with all products manufactured and certified according to the latest international standards.

Corporate Advantages and Global Outlook

CDSR's success as the China Best Armoured Floating Hose Exporter is also tied to its operational philosophy and market engagement.

CDSR maintains a strong adherence to principles that underpin trust in the industry:

Over five decades in rubber product design and manufacturing provides a depth of institutional knowledge few competitors can match.

Specialization in highly regulated products like GMPHOM 2009 marine hoses and specialized Armoured Floating Hose products demonstrates profound technical expertise.

Recognition from major clients like CNOOC and certification to international standards (ISO 9001, ISO 45001, ISO 14001) establish CDSR's authoritative standing.

The company is dedicated to a rigorous high-quality handle system and a "Client-Oriented" business philosophy, exporting products to over 60 countries and areas globally, including America, Australia, and Europe.

Responding to Market Trends

The global dredging hose market is forecast to continue its steady growth, largely driven by increasing demand for infrastructure development and the expansion of the offshore oil and gas industry. Key trends emphasize the need for hoses that offer greater durability and longer life to reduce maintenance downtime and environmental risk. CDSR's focus on innovative, durable products, particularly its highly wear-resistant Armoured Hoses, aligns directly with this forward-looking industry demand.

Conclusion

Jiangsu CDSR Technology Co., Ltd. is not merely a supplier; it is a vital engineering partner to the global marine and dredging industries. By leveraging its five decades of manufacturing heritage, its dedication

to rigorous international standards such as GMPHOM 2009, and its innovation in specialized products like the high-performance Armoured Floating Hose, CDSR has demonstrably secured its reputation as the China Best Armoured Floating Hose Exporter. The company's continued investment in technology and quality ensures that it is well-equipped to meet the evolving and increasingly complex needs of the global fluid transfer market.
