

Hello Recruiter Announces Greenhouse & Ashby Integrations for AI Powered Interviews

Fort Lauderdale based AI hiring technology company Hello Recruiter is now available as a native interview stage inside Greenhouse and Ashby, enabling recruiting teams to run structured AI interviews without leaving their ATS.

Hello Recruiter Integrates with Greenhouse & Ashby

AI-powered interviews, right inside your
recruiting workflow.

Integrations

Now Live in Beta

Connect your ATS. Power interviews with AI.

Ashby

**Faster hiring.
Stronger teams.**

*And this is
just the beginning.*

platform built for teams that are always hiring, today announced the beta launch of its integrations with Greenhouse and Ashby, two widely used applicant tracking systems.

The integrations bring Hello Recruiter's AI hiring agents directly into existing recruiting workflows. Instead of requiring recruiters to move candidates between separate systems, Hello Recruiter can run as an interview stage within Greenhouse or Ashby, with candidate invitations, interviews, scoring, and structured results connected to the candidate record.

The integrations are now available in beta, with early access open to teams already using Greenhouse or Ashby.

"Recruiters shouldn't have to rebuild their workflow just to add better interviewing," said Ayush Jain, Co-Founder of Hello Recruiter. "We built these integrations around a simple idea: keep the ATS your team already uses and add an intelligent interview layer directly into it. ARIA handles the interview process and delivers structured evidence, while hiring teams remain in control of every decision."

AI interviews without another recruiting system

Adding another point solution to an already crowded recruiting stack can create more work for recruiters: additional logins, disconnected candidate information, manual data entry, and results scattered across different platforms.

Hello Recruiter's Greenhouse and Ashby integrations are designed to remove that friction.

With the integrations, recruiting teams can:

- Add ARIA as an interview stage within their existing Greenhouse or Ashby workflow.
- Select candidates directly from the ATS to enter the AI interview stage.
- Automatically send candidate invitations and run the interview through Hello Recruiter.
- Receive structured interview results back on the candidate record.
- Review score summaries, skill evidence, and the full interview report without searching across multiple tools.
- Keep hiring decisions with people - ARIA does not advance, reject, or hire candidates.

The connected workflow allows teams to keep their existing recruiting infrastructure while adding an AI-powered interview layer where it is most useful.

Built for evidence, not just automation

Hello Recruiter's approach to AI-powered hiring focuses on giving recruiters and hiring managers better evidence to make decisions.

ARIA conducts structured, role-specific interviews and returns a summary of the candidate's performance, including skill evidence and a link to the full report. Hiring teams can then evaluate that information alongside the rest of the candidate's application.

The integration does not replace the existing ATS workflow. Stage movement, rejection, and hiring decisions remain under the control of the recruiting team.

“We believe the future of recruiting isn’t human versus AI,” said Avi Tiwari, Co-Founder of Hello Recruiter. “It’s about giving recruiting teams AI that handles the repetitive work while making the human decision-maker better informed. Connecting ARIA directly to the ATS is an important part of making that practical.”

Greenhouse + Hello Recruiter

With the Greenhouse integration, ARIA can be added as a stage in an existing interview plan. Job details and selected candidate context move into the interview workflow, while a structured interview note, score summary, skill evidence, and report link return to the candidate record.

Ashby + Hello Recruiter

The Ashby integration follows the same connected workflow. Recruiting teams can introduce ARIA as an interview stage, select candidates from their existing pipeline, and have structured interview results returned to the candidate record.

Early access now available

The Greenhouse and Ashby integrations are currently in beta. Hello Recruiter is inviting recruiting teams already using either ATS to request early access and work with the Hello Recruiter team on setup.
