

Lithosphere Announces LITHO Token Generation Event for October 15, 2026

The October TGE will advance LITHO from its current Pre-TGE phase into broader token and network participation across Lithosphere's AI-native Web4 ecosystem.

Singapore, Singapore Sep 9, 2026 (Issuewire.com) - [Lithosphere](#), the AI-native Layer 1 blockchain ecosystem built for Web4, autonomous agents, and intelligent applications, today announced that the LITHO Token Generation Event will take place on October 15, 2026. The milestone will move LITHO beyond the current Pre-TGE phase and into a broader stage of ecosystem participation as Lithosphere continues expanding the infrastructure connecting users, developers, applications, and autonomous systems.

The TGE follows a product-led rollout designed to establish practical ecosystem access before broader token participation. Thanos Wallet provides self-custody and multi-chain access for users and autonomous agents, Quantts AI extends collaborative financial intelligence through specialized agent systems, and Makalu Testnet provides a live environment for network testing and developer activity. Together with Lithic, DNNs, MultX, PPAL, and the LEP100 standards framework, these components form the execution, identity, coordination, and access layers supporting Lithosphere's Web4 strategy.

“The October 15 TGE marks an important transition for LITHO because it connects broader token participation with infrastructure that has been built around real Web4 activity,” said J. King Kasr, Chief Scientist at KaJ Labs. “Our focus is on giving users, developers, autonomous agents, and intelligent applications a network where execution, access, identity, and coordination can operate as connected infrastructure rather than isolated tools.”

Until the TGE, the LITHO Pre-TGE remains the current participation phase. Lithosphere will use the period leading into October 15 to continue strengthening product readiness, developer access, agentic infrastructure, and network participation as the ecosystem prepares for the next stage of LITHO utility and Web4 adoption.

About Lithosphere

Lithosphere is an AI-native Layer 1 blockchain ecosystem developed by KaJ Labs for Web4, autonomous agents, intelligent applications, and cross-chain digital infrastructure. Its technology stack is designed to support execution, identity, coordination, verification, wallet access, and developer activity across connected decentralized systems.
