PRESS RELEASE

MIRKETA INTRODUCES VENDOR GRACE

Vendor Governance, Risk and Compliance Engine

An AI copilot for vendor governance, risk & compliance delivering multi-tier visibility, intelligent document review, and proactive risk management across the supply chain.

COMPLIANCE GAP DETECTION & RISK SCORING

INTELLIGENT DOCUMENT INGESTION

RENEWAL ORCHESTRATION

GRACE COPILOT AI ASSISTANT

MULTI-TIER SUPPLIER COMPLIANCE

VENDOR GRACE
AI COPILOT FOR VENDOR GOVERNANCE, RISK & COMPLIANCE

Vendor GRACE Dashboard

- Overall Compliance Score: 86% Compliant
- Risk by Tier: Tier 1: 28, Tier 2: 56 Risks, Tier 3: 112 Risks
- Documents Analyzed: 1,248 (vs last 30 days: +32%)
- Expiring Soon: 18 Documents
- Top Risk Categories: Environmental Compliance (High), Labor Compliance (Medium), Quality Certification (Medium)

70%+ FASTER VERIFICATION

3-5x FASTER ONBOARDING

VISIBILITY ACROSS ALL 3 SUPPLIER TIERS

REDUCE RISK. ENSURE COMPLIANCE. BUILD OPERATIONAL TRUST.

Dublin, California Sep 2, 2026 ([Issuewire.com](https://www.issuewire.com)) - Mirketa today introduced its Salesforce-native, AI-powered Vendor Governance, Risk and Compliance Engine, Vendor GRACE, giving procurement and compliance teams automated visibility into supplier risk across multiple tiers of the supply chain.

Compliance failures that halt a production line rarely originate with a company's direct supplier. They typically trace back to a subcontractor two or three tiers down the chain, the segment of the supply chain most procurement teams have had no practical way to monitor. Mirketa built the platform to close that gap.

"The real differentiator is the Multi-Tier Risk Propagation," said Ajay Jalali, VP - Delivery & Operations at Mirketa. "While traditional tools stop at Tier 1, our platform maps sub-supplier hierarchy. If a deep-tier sub-supplier fails a critical regulation, the system automatically calculates the cascading impact so you can act before it becomes a bottleneck."

Vendor GRACE allows procurement team to invite suppliers to upload relevant compliance documentation followed by an AI driven compliance review and risk scoring of each submission

ensuring manual effort for procurement team is drastically reduced. The product automates operational trust from end to end with five core capabilities.

Core Capabilities

- **Intelligent Document Ingestion** - GRACE classifies, extracts, and scores confidence on every certificate, license, and compliance document a supplier submits, with no manual data entry.
- **Compliance Gap Detection & Risk Scoring** - Missing or expired certifications are flagged automatically and scored against jurisdiction-specific requirements in real time.
- **Renewal Orchestration** - Expiry dates are tracked continuously, with proactive alerts sent well before a lapse becomes a liability.
- **Multi-Tier Supplier Compliance** - Tier 2 and Tier 3 sub-supplier relationships are mapped automatically, with risk signals propagating up the chain, a depth of visibility no competing platform currently offers.
- **GRACE Copilot** - Mirketa's AI copilot for vendor governance, risk & compliance helps procurement managers and analysts prioritize which risks need attention first and navigate compliance workflows without digging through dashboards.

What Changes for Procurement and Compliance Teams

The platform is Salesforce-native by design, so compliance data flows straight into the CRM procurement teams already use, no spreadsheet exports, no manual re-entry. A self-service supplier portal takes the bulk of document collection off procurement's desk, and continuous monitoring from GRACE catches issues before an audit does. Early benchmarks show verification running more than 70% faster than manual review, onboarding three to five times quicker, and full visibility across all three supplier tiers.

The platform is purpose-built for manufacturing, industrial, defense, healthcare, and aerospace, and chemical manufacturing supply chains, sectors already mapped in the product's compliance engine. Learn more [here](#).

About Mirketa

Mirketa Inc. is an AI-first consulting company and Salesforce partner headquartered in San Ramon, California. The company specializes in digital transformation for nonprofit and social impact organizations, Salesforce implementation services, nonprofit cloud consulting, AI enablement, enterprise data integration, and intelligent automation solutions. Its architecture combines the data and integration layer, intelligence and prediction layer, and agent orchestration layer, forming the infrastructure required to deploy enterprise AI at scale.
