

Morevy launches early access to recurring revenue analytics platform for finance teams

The Los Angeles start up delivers both rapid movement analysis and clear, defensible commentary on subscription revenue performance, giving finance teams speed and context in one unified view.

Los Angeles, California Sep 14, 2026 ([Issuewire.com](https://www.issuewire.com)) - Morevy today announced early access to its recurring revenue analytics platform, built specifically to help finance teams track and forecast revenue tied to subscription and usage-based business models.

The platform is designed to replace spreadsheets and disconnected data sources with a unified system for revenue visibility. Key features include revenue trend analysis, cohort tracking, and customizable reporting dashboards tailored to the complexities of recurring revenue models.

Recurring revenue businesses often manage vast volumes of billing and usage data, along with intricate logic around renewals, upgrades, and churn. Morevy's platform is built to process this complexity automatically, giving finance leaders a clearer, faster path to understanding performance.

Numerical figures found in any table or chart come from the calculation engine, not the language model. The model picks which calculation to run and cannot change what comes back. Where a figure has no calculation behind it, nothing renders in its place.

"Finance teams often has to choose between a fast number or one they actually feel confident in," said Nathan Woo, Founder of Morevy. "What I care about most with AI-enabled workflows is what the software *does not* know."

Early access is now open to finance teams looking to modernize or try alternative solutions for tracking

and forecasting recurring revenue and can request access at morevy.ai.

About Morevy

Finance owners are judged on the number they put their name to that's where trust and judgement live. Morevy is recurring-revenue analysis software for finance owners and fractional CFOs that consolidates recurring revenue analysis into a single source of truth, helping finance leaders track performance and make informed decisions with better context.
