

Reliable Dual-Standard L-Serine Supply for Global Nutrition Markets

L-Serine Product Spotlight

Exploring New Possibilities
in Amino Acid Applications

PRODUCT NEWS

Tianjin, China Sep 4, 2026 ([Issuewire.com](https://www.issuewire.com)) - As demand for high-quality amino acids continues to grow across nutrition, dietary supplements, and functional food applications, Tianjin Brightful Nutrition Co., Ltd. is strengthening its supply of L-Serine with two widely recognized specifications: USP and EP.

L-Serine is a naturally occurring amino acid used in a range of nutritional and formulation applications. With its established position among amino acid ingredients, it remains an important choice for manufacturers looking for reliable raw materials with clear quality requirements.

At Brightful, we currently offer both [L-Serine USP](#) and [L-Serine EP](#) grades to meet different customer requirements. The availability of dual specifications gives buyers more flexibility when developing or sourcing amino acid products for different markets.

Two Specifications, One Focus on Consistency

For international buyers, choosing an amino acid supplier is not only about price. Consistent quality, documentation, production stability, and communication can make a real difference when a product moves from sampling to regular orders.

Our **L-Serine USP** grade is suitable for customers whose projects require compliance with USP-related specifications, while **L-Serine EP** is available for customers working with European Pharmacopoeia requirements.

Both grades are supplied with supporting quality documentation, including COA and product information, according to the customer's requirements.

Beyond L-Serine, Brightful also supplies a broad range of amino acid ingredients, including [L-Glutamine](#), **L-Leucine**, **L-Isoleucine**, **L-Valine**, **L-Proline**, [L-Lysine](#), and **L-Threonine**. This allows customers to consolidate multiple amino acid requirements through one experienced China-based supplier.

Supporting More Flexible Global Sourcing

One thing we have learned from working with international customers is that every project is different.

Some customers need a small quantity for laboratory evaluation. Others are preparing for a new product launch and need a stable supply plan for regular shipments. In both cases, timely communication and practical sourcing support are just as important as the ingredient itself.

Brightful works closely with qualified manufacturers and supports customers from sample arrangement and specification confirmation to documentation, quotation, and shipment coordination. Our goal is simple: make the sourcing process easier and more predictable for customers.

With more than 10 years of experience in the food and nutrition ingredient industry, we understand that a long-term supply relationship is built batch by batch and shipment by shipment.

L-Serine for Your Next Project

Whether you are looking for [L-Serine USP](#) or [L-Serine EP](#), our team can provide the relevant specifications and COA for your evaluation.

If you are currently developing a dietary supplement, nutritional formulation, functional food, or another amino acid-based product, feel free to contact Brightful for current availability, specification details, sample support, and a quotation.

We are always happy to discuss the actual requirement first and then work out a practical supply solution.
