RN Valves & Faucets Expands PTMT and Brass Bathroom Fitting Range for Indian Homes and Commercial Projects

RN Valves & Faucets continues to expand its range of PTMT faucets, bathroom fittings, and brass valve solutions for residential and commercial applications.

Ghaziabad, Uttar Pradesh Sep 15, 2026 (Issuewire.com) - RN Valves & Faucets, a faucet manufacturer in India operating from the Sahibabad Industrial Area since 2000, has widened its production range of PTMT taps, CP brass faucets, showers, health faucets, and allied sanitary accessories to meet rising demand from residential builders, hotels, hospitals, and institutional buyers across the country.

The expansion focuses on two product families that behave very differently in Indian water conditions. PTMT (Polytetrafluoroethylene Modified Thermoplastic) fittings resist scaling and corrosion in hard-water regions where conventional metal taps develop white deposits and stiffen at the spindle within a few seasons. Brass fittings, produced under the company's role as a brass valve manufacturer, are specified where weight, thread strength, and long service life under continuous pressure matter more than cost.

Water hardness across large parts of North India regularly crosses 300 ppm. In those conditions, the failure point in a bathroom is rarely the pipe. It is the tap spindle, the aerator, and the seal. RN Valves & Faucets designs around that reality by using ceramic disc cartridges in its CP range, thicker wall

sections in its PTMT bodies, and quarter-turn mechanisms that reduce the wear caused by repeated over-tightening, a habit common in shared and rented housing.

The current catalogue covers pillar cocks, bib cocks, angle valves, wall mixers, single-lever diverters, overhead and hand showers, health faucets with 1-metre and 1.5-metre flexible tubes, and bathroom accessory sets in matching finishes. Products are manufactured, assembled, and quality-checked at the company's Site 4 facility in Sahibabad, which keeps lead times short for dealers in Delhi NCR, Uttar Pradesh, Haryana, Punjab, and Rajasthan.

Cost is a practical consideration for developers fitting out hundreds of units. A PTMT faucet typically costs a fraction of an equivalent chrome-plated brass fitting while offering comparable service life in low-to-moderate pressure applications. For projects balancing budget against replacement cycles, the company supplies mixed specifications: PTMT for utility areas, service bathrooms, and terrace connections, brass for primary bathrooms and public-facing installations.

Sustainability enters the picture through aerators and flow restrictors fitted as standard on several models. These reduce discharge without the thin, unsatisfying stream that causes users to open taps fully and defeat the purpose. PTMT itself involves lower energy input in manufacturing than brass casting and machining, and the material does not leach metal into standing water.

Over twenty years, RN Valves & Faucets has built its distribution through hardware dealers, sanitaryware retailers, plumbing contractors, and project procurement teams rather than through consumer advertising. The company continues to work directly with architects and interior contractors on specification support, offering technical drawings, finish samples, and bulk pricing for tenders.

About RN Valves & Faucets

Founded in 2000 and based in Sahibabad, Ghaziabad, RN Valves & Faucets manufactures PTMT taps, brass faucets, CP fittings, showers, health faucets, angle valves, and bathroom accessories for residential and commercial use across India. The company focuses on durability, corrosion resistance, and value pricing, supplying dealers, contractors, and project buyers nationwide.
