

SPLAKDHN Expands GPS Tracking and Fleet Management Solutions for Indian Businesses

Indian GPS and telematics brand offers vehicle tracking, fleet monitoring and asset tracking solutions for cars, bikes, trucks and commercial fleets.

New Delhi, Delhi Sep 16, 2026 ([Issuewire.com](https://www.issuewire.com)) - SPLAKDHN, an India-based GPS tracking and telematics brand, is expanding its range of vehicle tracking, fleet management and asset monitoring solutions for businesses, fleet operators and individual vehicle owners across India.

The company provides GPS-based tracking solutions designed for a variety of applications, including cars, motorcycles, trucks, commercial vehicles, logistics fleets, transportation businesses and movable assets.

SPLAKDHN's product range includes **OBD GPS trackers, wired GPS trackers, wireless and personal GPS trackers, AIS-140 vehicle tracking solutions, GPS-enabled asset monitoring solutions and dashcam systems.**

The company's GPS tracking solutions connect tracking devices with online monitoring platforms, allowing users to view vehicle locations and monitor important vehicle activities remotely. Depending on the device and application, available tracking capabilities can include live location monitoring, route history, vehicle movement, speed monitoring, geofencing and event alerts.

For fleet operators, GPS tracking can provide a centralized view of multiple vehicles and help businesses maintain visibility over vehicles operating across different locations. The technology can be applied to transportation, logistics, field operations, commercial fleets and other businesses where vehicle movement and asset visibility are important.

SPLAKDHN also works with GPS dealers, resellers and business partners looking to provide vehicle tracking and telematics services in their respective markets.

The company is developing its presence through a combination of online distribution, business partnerships and local service initiatives, with an emphasis on making GPS tracking technology accessible to customers across different parts of India.

“GPS tracking has evolved beyond simply knowing where a vehicle is located. Businesses increasingly need visibility into vehicle movement, fleet activity and important operational events,” said a representative of SPLAKDHN. “Our focus is on providing practical tracking solutions that can be adapted to different vehicle, fleet and asset-monitoring requirements.”

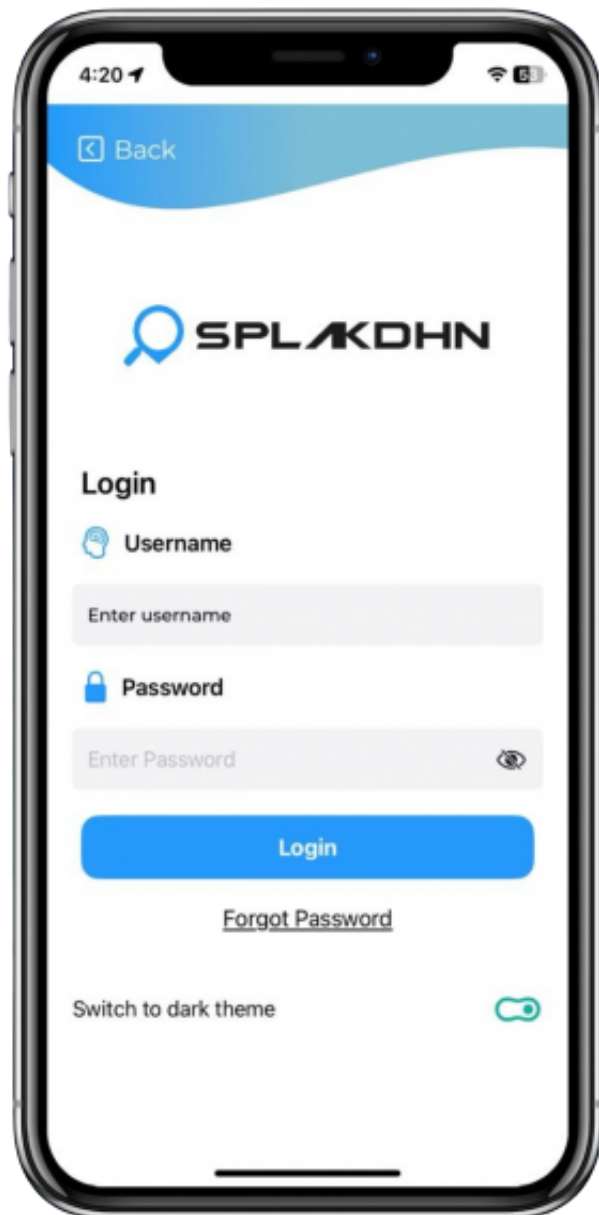

SPLAKDHN's broader technology portfolio is focused on **GPS tracking, vehicle telematics, fleet management, asset monitoring and connected mobility**. The company serves both individual customers and businesses looking for GPS-based monitoring solutions.

More information about SPLAKDHN's GPS tracking and telematics solutions is available through its website.
