

SwipeLocal Launches Business Activation Platform to Help UAE Businesses Get Operational Faster

Dubai-based SwipeLocal brings payment acceptance, POS and e-commerce solutions together to simplify the journey from setting up a business to becoming operational.

THE SMARTER WAY TO PAY

Dubai, United Arab Emirates Sep 11, 2026 ([IssueWire.com](https://www.issuewire.com)) - ***Launching a business is fast. Becoming operational is not.*** Once a company is licensed, business owners still need the infrastructure that allows them to accept payments, sell in-store and online, and manage the practical requirements of trading.

[SwipeLocal](#) has launched a business activation platform designed to simplify this journey by bringing relevant payment and business technology solutions together through a streamlined merchant onboarding experience.

One journey from setup to payment acceptance

Rather than requiring businesses to navigate multiple providers and disconnected processes, SwipeLocal brings together payment acceptance and related solutions around the needs of the merchant. The platform is designed for SMEs and growing businesses across sectors including F&B, retail, hospitality, professional services and e-commerce.

POS and in-store payments

SwipeLocal supports businesses with in-store payment acceptance solutions tailored to different operating models. Depending on business requirements and partner availability, these include:

1. Traditional POS payment terminals
2. SoftPOS solutions that enable compatible mobile devices to accept contactless payments
3. Contactless payments and digital wallets including Apple Pay and Google Pay
4. Visa and Mastercard acceptance
5. QR payment options
6. Dynamic Currency Conversion (DCC), where available through the relevant acquiring partner

The objective is not simply to provide a payment terminal, but to help businesses select an acceptance setup that fits how they sell, serve customers and operate.

E-commerce and digital payments

For businesses selling online or taking payments remotely, SwipeLocal can support digital acceptance through solutions including:

1. E-commerce payment gateway solutions
2. Pay by Link for remote and social/WhatsApp-led selling
3. Hosted payment pages
4. Digital payment acceptance through supported wallets and payment methods
5. Recurring or subscription payments where supported
6. Integration options for businesses that require a more connected online checkout experience

This gives businesses flexibility to start accepting digital payments without every merchant needing the same technology stack.

Built around a partner ecosystem

SwipeLocal operates within a partner-led payments ecosystem, working with payment, technology and financial-services providers to bring relevant capabilities to merchants. Product availability, onboarding, underwriting, pricing and approvals remain subject to the relevant provider and applicable requirements.

Security and responsible enablement

SwipeLocal is PCI DSS Level 1 compliant and is designed to support secure payment acceptance without requiring SwipeLocal to hold customers' card data. The company works with established payment infrastructure and partners to support merchant onboarding and payment processing.

Why SwipeLocal, why now?

The UAE continues to be a highly dynamic environment for entrepreneurs and SMEs. As businesses become increasingly digital, the ability to accept payments across physical and online channels is no longer a separate consideration—it is part of becoming operational.

SwipeLocal's vision is to make that transition simpler by helping businesses access the payment and technology infrastructure they need through a more connected activation journey.

About SwipeLocal

SwipeLocal is a UAE-based business activation platform focused on helping businesses become operational through simplified access to payment acceptance, POS and e-commerce solutions. Through its partner ecosystem, SwipeLocal connects merchants with relevant payment and technology capabilities designed around the way modern businesses operate.
