

Trellissoft Announces DocuVera360 Evolution into Enterprise Intelligence Platform

Trellissoft expands DocuVera360 beyond document processing to connect enterprise data, automate workflows and support real-time decision intelligence.

San Jose, California Sep 2, 2026 ([issuewire.com](https://www.issuewire.com)) - Trellissoft today announced the evolution of DocuVera360 from a document-processing platform into a full-scale **AI Data Automation Software and Enterprise Intelligence Platform** designed to connect fragmented enterprise information and support intelligent business operations.

DocuVera360 integrates structured enterprise applications, including ERP, CRM and QMS, with unstructured information such as emails, contracts and business reports. The platform creates a governed semantic layer and unified operational view across organizational systems, helping executive teams move beyond fragmented reporting toward real-time decision intelligence.

From Document Processing to Enterprise Data Automation

DocuVera360 connects information across sales, finance, operations, customer success and procurement to provide greater context around business performance.

Its capabilities include:

- **AI-Powered Data Unification** for automated schema mapping, field discovery and semantic understanding across structured and unstructured data.
- **Agentic AI & Workflow Orchestration** for autonomous multi-step processes with human-in-the-loop exception handling and auditability.
- **Conversational Enterprise Assistant** for natural-language queries across enterprise information.
- **Proactive Operational Intelligence** through continuous monitoring, predictive analytics and anomaly detection.

“Enterprises are adopting AI faster than they can unify the data behind it, and fragmented systems have become the biggest blocker to real-time decision-making,” said Severo Dsouza, CEO of Trellissoft.

“DocuVera360 is not just about processing documents—it provides an intelligent operational layer for the entire enterprise.”

According to Trellissoft's current product messaging, organizations utilizing DocuVera360's AI data automation capabilities achieve improvements including faster decision cycles, improved profit margins, reduced customer service costs and faster insight generation.

The platform is built on a modular, API-first architecture and offers enterprise-grade security, secure multi-tenancy and flexible deployment across cloud, on-premises and hybrid environments.
