

AI-Native Blockchain Lithosphere Prepares LITHO for CEX and DEX Listings as MEXC Integration Progresses

Following public mainnet activation and the LITHO TGE, Lithosphere is advancing centralized and decentralized exchange readiness to broaden token access.

Seattle, Washington Oct 21, 2026 ([Issuewire.com](https://www.issuewire.com)) - [Lithosphere](https://lithosphere.io), the AI-native Layer 1 blockchain ecosystem developed by KaJ Labs, is preparing LITHO for additional centralized exchange (CEX) and decentralized exchange (DEX) listings as the network enters its post-mainnet phase. MEXC is currently in the integration phase, while Lithosphere continues technical and market-access preparations for broader LITHO availability.

The exchange-readiness effort follows Lithosphere's public mainnet launch on October 13 and the LITHO Token Generation Event on October 15, 2026. With the production network operating, the ecosystem is moving toward wider access for token holders, developers, and participants seeking to interact with applications and services built on Lithosphere.

Integration work involving MEXC is focused on the steps required to support potential exchange availability, including network compatibility and operational coordination. The process remains in progress. Any listing activation, trading pairs, and launch schedule will be communicated through official channels when the relevant requirements have been completed.

Alongside its centralized exchange preparations, Lithosphere is pursuing decentralized market access through infrastructure across its ecosystem, including Ignite DEX. The objective is to support accessible trading environments while aligning market availability with verified assets, technical readiness, and

sufficient liquidity.

LITHO is designed to support the network's economic activity through transaction fees, staking, validator participation, and governance-related functions. Broader access across exchange venues is intended to complement those uses by making it easier for eligible participants to obtain and use the network's native asset.

About Lithosphere

Lithosphere is an AI-native Layer 1 blockchain ecosystem developed by KaJ Labs for Web4, autonomous agents, intelligent applications, and cross-chain digital infrastructure. Its technology stack is designed to support execution, identity, coordination, verification, wallet access, settlement, interoperability, and developer activity across connected decentralized systems.
